DISPOSABLE MICROFIBER SLEEVE

Dispocover is a 100 % microfiber sleeve manufactured in Europe. Very thin and light, it slips onto its *Ergoflex* handle like a glove.

It prevents the risks of falling and lumbago as, once on its handle, it gives you to access the most hard-to-reach places. You can dust in complete safety, even high up, with both feet on the floor, by connecting a telescopic handle from the DECITEX range in place of the handle (Mini 77 cm or standard 1.60 m).

Its white colour demonstrates its effectiveness and shows when it is dirty. A perfect inspection tool for the most demanding! *Dispocover* is generally used dry for dusting but can also be used damp if necessary.

Ultrasonic cutting gives *Dispocover* its sealed edges with very low particle release (it releases no particles). It's therefore an ideal disposable product for use in sensitive areas to limit the risk of contamination.
