

# Klerpack® Sterile Clips

## Advantages

- **Minimise contamination of opened bags**

Klerpack Sterile Clips can be used to seal all kinds of bags within isolators, laminar flow cabinets and cleanrooms, for example sample bags, or opened Klerpack Multi-Packs.

- **Reduce contamination from waste**

The clips can be used for sealing waste bags, thereby reducing the risk of contamination from particulates or micro-organisms that might come from waste items.

- **Secure seal**

The unique double edged design and snap closure ensure a secure seal, even for liquids.

- **Robust construction**

The clips are made from polyamide which is lightweight and very robust, making it suitable for repeat use. The material is low particulate, does not corrode and is compatible with Shield Medicare disinfectants.

- **Klerpack Multi-Pack format**

The clips are individually double bagged and supplied in an outer polythene bag containing 10 clips, making them quick and easy to transfer into controlled areas. The polythene does not generate any particulates.

## Description

Klerpack Sterile Clip Multi-Packs contain 10 clips, individually double bagged. Each clip is 263mm x 40mm, with a double edged seal width of approximately 220mm.

The clips are manufactured from polyamide 6.6 with a very robust hinge and snap closure, which ensures a secure seal and prevents accidental opening.

The clips are packed in a cleanroom environment, double bagged and gamma irradiated at not less than 25kGy.

## Validation

EN ISO 9001:2008, EN ISO 13485:2003 and European Medical Device Directive 93/42/EEC accredited company.

Certificates available for each irradiated batch.
