

Klerpack[®]

Sterile Ballpoint Pens

Advantages

- 5 double bagged pens (with no caps) conveniently packed for easy transfer
- Permanent blue or black ink to meet QA requirements for photocopied documents
- Now with Klertear feature, so packs are easy to open even when wearing gloves

Description

Klerpack Sterile Pens are available with black or blue ink for note taking in cleanrooms and critical areas. They are ideal for use with Klerpack Sterile Paper.

They have a lightweight hexagonal barrel which provides comfortable and controlled writing. The tungsten carbide ball writes consistently and will not skip or blob. The line width is 0.2mm.

The pens are packed in a cleanroom environment, with five pens per double bag pack. For the VHP product the inner polyethylene bag is replaced with foil which prevents vapourised hydrogen peroxide from entering the packaging. They are gamma irradiated at not less than 25kGy. The packs have the Klertear feature, making them easy to open, even with gloved hands.

Validation

EN ISO 9001:2008, EN ISO 13485:2012 and European Medical Device Directive 93/42/EEC accredited company.

Certificates available for each irradiated batch.
