

Klerpack®

Sterile Syringes

Klerpack Sterile Syringe Multi-Packs contain CE marked BD Luer-Lok Syringes in convenient double bagged quantities.

Advantages

- **Improves transfer disinfection protocols**

Sterile double bagged packs reduce the risk of an initial bioburden and mean that only one item has to be disinfected. The single bag is easier to wipe, enabling more effective spray & wipe protocols to be used.

- **Quick & cost effective**

Single bag transfer is very quick, reducing the amount of technician time required for disinfection, especially where increased wiping is recommended. Technician time can be better deployed producing high quality aseptic products. This can improve the overall capacity of an aseptic unit.

- **Reduces particulate generation & packaging waste**

The easy-tear polythene packaging significantly reduces the generation of particles compared with paper backed individual syringe blister packs. Overall packaging waste is reduced, minimising the space required to store waste items within confined isolator & laminar flow cabinets.

- **Safe to use**

The need to spray only one bag significantly reduces the amount of alcohol spraying, thereby reducing the risk of inhalation.

- **Available with only metric graduations**

All syringes sizes are available as EU specification syringes with single metric graduations minimising the risk of confusion which may occur with dual labelled syringes.

- **Designed for aseptic processing**

All syringes are tipped to prevent any accidental risk of contaminating the syringe tip when removing the syringes from the bag.

Description

Klerpack Multi-Packs contain CE marked sterile BD Luer-Lok syringes in a convenient range of pack quantities including 5, 10, 25 and 50's. Available syringe sizes are 1ml, 3ml, 5ml, 10ml, 20ml, 30ml and 60ml.

All sizes are now available as EU specification syringes with only metric graduations on the barrel. Sizes 1ml, 3ml, 5ml and 10ml syringes are packed in a cleanroom environment, double bagged and gamma irradiated at not less than 25kGy. Sizes 20ml, 30ml and 60ml syringes are packed in a cleanroom environment, double bagged and Ethylene Oxide sterilised.

Gamma irradiated packs of US specification 20ml, 30ml and 60ml syringes are also available.

Other quantities, syringe brands and sizes are available on request. Vaporised hydrogen peroxide impermeable packaging, which significantly reduces the aeration time during decontamination cycles, is also available - details on request.

Validation

EN ISO 9001:2008, EN ISO 13485:2003 and European Medical Device Directive 93/42/EEC accredited company.

CE marked packs.

Certificates available for each irradiated batch.

Batch details include original syringe lot details for full traceability.

A range of other sterile cleanroom components is also available, including needles, sharps bins, medical devices and pens. Ask for more details.

Sterile Pharma Needle Multi-Packs

Klerpack Sterile Pharma Needle Multi-Packs contain either 21 gauge or 19 gauge Terumo needles in pack quantities of 25 or 50. Each needle has a tamper-proof cap to protect against contamination of the lumen.

The needle is non-coring due to its sharp bevelled edge. High quality siliconisation of the shaft gives a very low drag value, also leading to less damage to the vial septum. The needle wall thickness is optimised for ease of use, so the needle shaft is thinner than an equivalent gauge standard needle, without losing any strength.

Needle Multi-Packs

Klerpack Sterile Needle Multi-Packs contain needles in convenient packs of 10. Currently available are 19 gauge 1.5" inch needles and 1.5" 5µm filter needles.

Needles are also available in Beta Bags for direct connection to an isolator unit, or with Vaporised Hydrogen Peroxide impermeable packaging to reduce aeration times.

Sterile Device Multi-Packs

Klerpack Device Multi-Packs contain a range of devices commonly required during aseptic processing in a convenient range of pack quantities including 5's, 10's, 25's and 50's.

The devices currently available include Chemo Dispense Pins and Fluid Dispense Connectors etc. Shield Medicare can also double bag and irradiate any devices that you routinely use - please contact us for more information.

Certain items are available with Vaporised Hydrogen Peroxide impermeable packaging to reduce aeration times.

Sterile Marker Pen Multi-Packs

- Permanent blue or black ink to meet QA requirements for photocopied documents
- Autoseal ink does not dry out
- Labelling is alcohol resistant so does not rub off on gloves

Klerpack Sterile Pens are available with black or blue ink for note-taking in cleanrooms and critical areas. Ten individually double bagged pens are conveniently packed into a third bag.
