

# Klerwipe™ Silicone

**Sterile low particulate wipes impregnated with silicone in a convenient resealable pouch.**

## Advantages

### ■ Very effective lubricant

Silicone provides excellent non-sticky lubrication for moving parts, such as filling lines, pumps and isolator cabinet seals.

### ■ Rapid and effective application

The highly absorbent wipes allow rapid and accurate coverage. The wipes remain wet throughout use ensuring a consistent application of silicone to the required surface area.

### ■ Ideal for sterile environments

Each sterile, double bagged, resealable pouch contains only 15 low particulate wipes, which is sufficient for most uses without compromising sterility. The wipes are also available in VHP impermeable packaging for use in gassing isolators.

### ■ Suitable for direct product contact use

The silicone is carried in Isopropyl Alcohol (IPA), which will evaporate completely, and the wipes do not contain any chemical binders, so only a light coating of silicone will remain.

### ■ No excessive build up

The silicone is carried in alcohol which enables a very thin film of silicone to be applied to surfaces, providing sufficient lubrication without an excessive build up.

### ■ Easy to use

The polythene packaging is easy to spray and wipe for efficient transfer and features “Klertear” which makes it easy to open even when wearing gloves. The Klerwipes are folded, so are easy to remove from the pouch. The silicone/IPA blend is classified as non-corrosive under normal use, so can be used safely in most cleanroom applications.

## Description

The wipes are impregnated with a blend of 10% silicone oil and 90% IPA.

They are packed in a Grade C (ISO Class 7) cleanroom and gamma irradiated. Each pouch is supplied double bagged in polythene that is easy to spray and wipe for efficient transfer. The packaging features Klertear, which makes the packaging easy to open, even with gloved hands. The wipes are also available in VHP impermeable packaging for use in gassing isolators.

The 200mm x 200mm wipes are made from 68gsm binder free, hydroentangled cellulose/polyester blend.

Each pouch contains 15 wipes so there is no wastage at the end of a session. The pouch is easily resealable to prevent the wipes drying out. The pouch itself does not generate any particulate contamination.

## Validation

Manufactured by a ISO 9001:2008, ISO 13485:2012 and European Medical Device Directive 93/42/EEC accredited company.

Certificates of conformity and irradiation are available for every batch.

2 year shelf life.
