KM Sterilized Nonwoven Wiper

Sterilized Nonwoven Sheet Wiper for Clean Environment

Product

Name	Description	Packaging
KM-6509	9" x 9"	10sh/10 I .bags/8 O.bags/box

Description

KM-6509 made of Polyester and Cellulose by high pressure water jet is excellent in hydrophile property and absorbs liquid well.
Even the cleaning on the rough surface is lint-free and it is a non-woven wiper that is excellent in contamination control.
KM-6509 sterilized with Gamma Ray is safe from Bacteria and Virus.

Feature

- Long time storage easiness with Gamma Ray sterilization
- High absorbency compared to light weight, thin thickness
- High absorption rate, quick absorption speed
- As Eco-friendly products, toxic gas generation control when incineration
- High absorption force compared to polyester & micro-denier fabric
- A solid structure, excellent durability of abrasion and resistant to physical shock and friction

Application

- Cleanroom, parts of assembly Line, equipment and floor for Cleaning
- Pre-cleaning of process equipment and parts for equipment
- Various equipment, an external surface of facilities and frame cleaning
- Access floor cleaning, parts, equipment and surface cleaning in Cleanroom

Product Environment

- Clean wipers produced in cleanroom
- Customers quality satisfaction through continuous cleanroom management
- Strict quality control based on ISO 9001:2008 quality standard
- Sterilization with Gamma Ray(cobalt-60) removes bacteria and virus
- Manages the Dosimetry range as 20~40kGy

Estimation by stage of validity period				OK	OK	OK	OK
N/A = Not applied M= months							

* Conclusion

Conclusion(Validation of packages)	Result
It has been decided that the established validity period can be applied because no meaningful difference has been found in the packing material that passed through accelerated aging test after Gamma Irradiation according to ASTM and ISO.	OK 2yr (24months)

1. Introduction

Gamma sterilization can be available for sealing package material. Depending on packing material, there may be property change or functional loss. So it is required to assess package material according to the procedures of ISO, ASTM, etc.

This report is the data certifying the validity period established by SOYAGREENTEC Co.,Ltd after testing the safety of the package material. Therefore it is not permitted for the data to be disclosed to or copied by a third party for its own commercial purpose.

2. Objective

This test is to confirm the validity period of 2 years (24months) by comparing the property state and package state of the products and package material before and after accelerated aging test at a certain temperature according to related specs of ISO11607 and ASTM as well as the guideline of KFDA for the validity period and safety estimation of medical equipment.

3. Test Scope

This report will be applied to confirm the safety of package material by international standard tests with Gamma Test facility of SOYAGREENTEC for its sterilized and non-sterilized products. Samples were randomly chosen and provided by the client company. And this test result does not guarantee the safety of the products in all environments.

If there is any change in package material or production process, this report must be altered accordingly. Besides, it is highly important to make sure of the physical property and sterility state of the products as well as real-time packing state in accordance with the relevant standards.

6. Sterilization method of product

According to the loading pattern planned in advance, products are loaded in totes by the operation team. In the totes, the products of the clients must be loaded in consecutively and must not be mingled with other products. Dosimeter has to be attached at ordinary supervisory point of the initial, mid, and final part in the series of totes. Before loading, attach Gamma Indicator on the exterior of equipment.

The totes in which products are loaded must be controlled separately from other products under survey, and must be controlled by the operator per cycle. All changes that may affect the absorption dose of the product in process such as variables of process, emergency stop of facility, source down, etc) must be recorded for preservation.

When the planned processing cycle is finished, collect Dosimeters attached to products so as to be read by Quality Control Team.

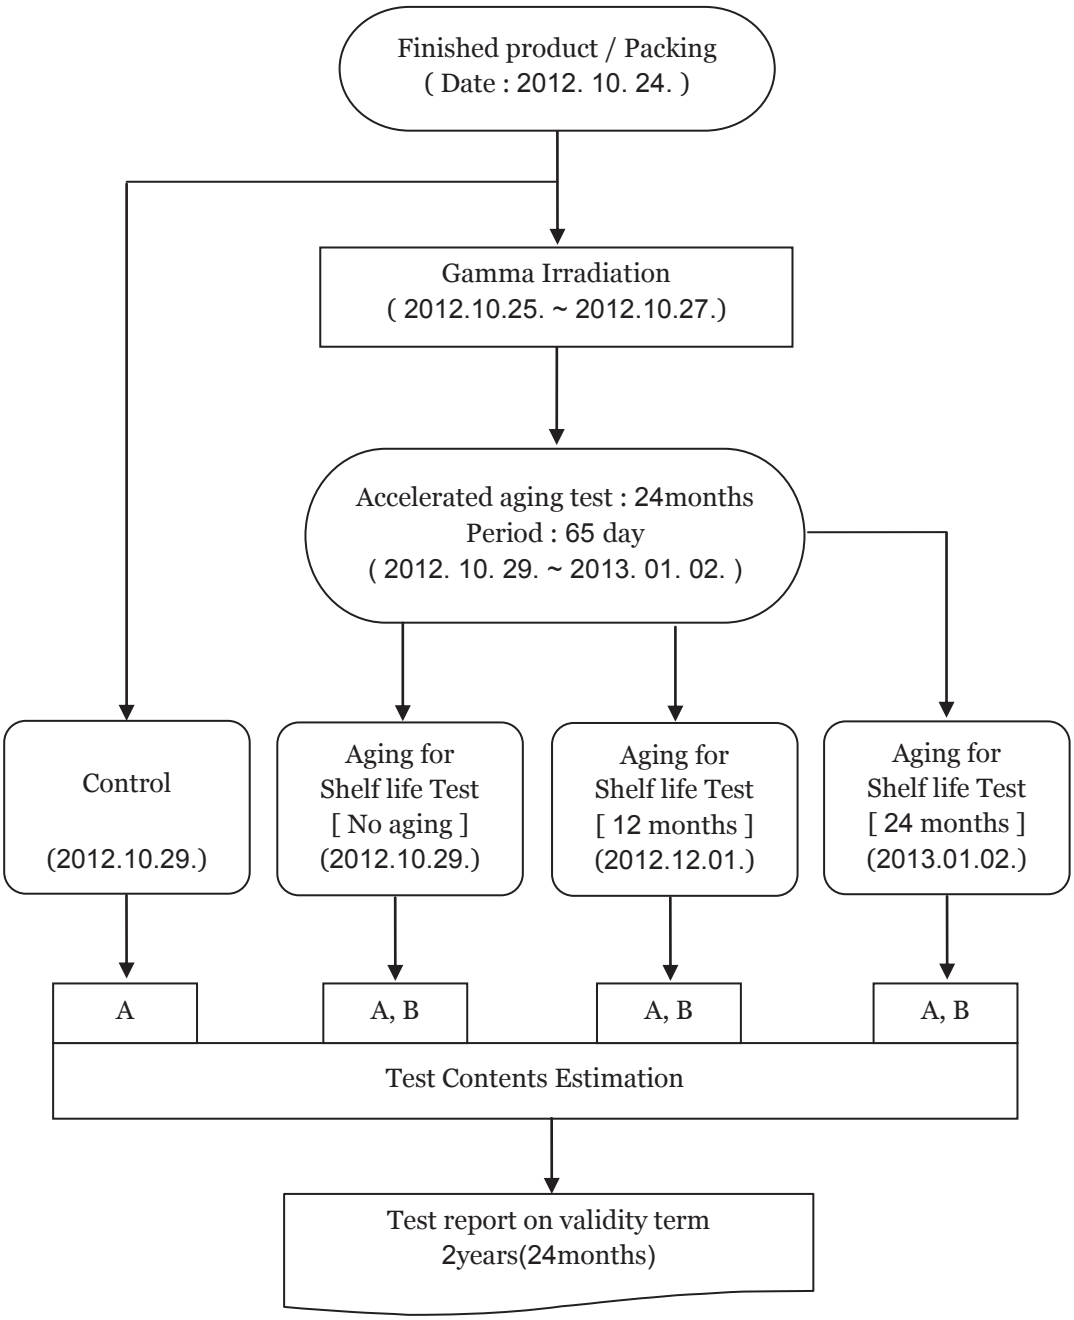
If survey has been made within required absorption dose range (25kGy ~ 40kGy) (that is, the minimum dose (sterility dose) of the tote to which the Dosimeter of the lowest value was attached is more than 25kGy, and the maximum absorption dose of the tote to which the Dosimeter of the maximum value was attached is not exceeding 40kGy), the process has been conducted successfully, and the product test process is finished.

The maximum absorption dose exceeds 40kGy, and the products loaded in the container must be treated as a failed process. So they must be treated according to the request of the client.

If the minimum absorption dose does not exceed 25kGy, it has to be treated as a failed process, and additional steps must be taken through the conference between managers of quality control team and operation team and the approval of the quality management representative. The additional steps must be treated by adjusting the process parameter within the range of required dose 25kGy and maximum absorption dose 40kGy. Here, the contents of additional steps must be recorded. The range of dose between 25~40kGy is wide, and additional survey is possible within the range not exceeding maximum absorption dose. In this case, as the additional steps are determined and conducted immediately after reading the dose (3~5 minutes), microbiological influence or product degradation by divided survey has been excluded from the estimation.

7. Protocol

(1) Test Plan



A : Visual inspection, Peel strength test
Dye penetration test, Burst test

B : Sterility test

(4) Test standard & Sample preparation

Test Type	Criteria	Sampling	Model / Std	Quantity (EA)
Visual inspection (packing)	ISO 11607	10ea per test point.(packaging)	Sealed packaging (120ea) + Finished product (36ea)	156
Gamma irradiation	ISO 11137	Gamma irradiation after checking sectional quantity. 40kGy(Based on maximum dose)		
Accelerated aging test	ASTM F1980-07	All samples except control group Prepare 90 samples (where 40kGy test is performed)		
Peel strength test	ASTM F88	10ea per test point. Cut to 15mm width.	Sealed packaging	40
Dye penetration test	ASTM F1929	10ea per test point.	Sealed packaging	40
Burst test	ASTM F1140	10ea per test point.	Sealed packaging	40
Sterility test	ISO 11737-1,2	Product 12ea per Accelerated test point.	Finished product	36
*The quantity includes spare samples as well.				

(5) Method & Procedure

1	Visual inspection
Purpose	Single out poor package to reduce error rate; make sure of the packing process when error rate is high.
Sample preparation	Prepare 10 samples randomly chosen.
Test system	Inspection stand Magnifying glass
Procedure	Inspect samples with a magnifying glass based on ISO11607 and mark poor samples.
Acceptance criteria	OK – If the sample is not poor.

2	Gamma irradiation test
Purpose	As Gamma sterility is applied to products, conduct test for samples with maximum dose which is expected to greatly affect the samples.
Sample preparation	Finished products : 36ea Sealed package material : 90ea
Test system	JS-10000 Gamma irradiation Dosimetry system (Measure absorbed dose)
Test Procedure	Put a sample box in tote for sterility [Tote: size (825mm*540mm*1500mm)] and attach Dosimeter to the position of maximum absorption dose to make sure of the dose.
Acceptance criteria	The range within +10% of ISO11137 is OK.

3	**Accelerated aging test**
Purpose	The test is to give extreme conditions to the finished products and sealed package which have passed Gamma Irradiation test with maximum absorption dose for the established valid period.
Sample preparation	Prepare the planned quantity of products (finished products and sealed package) after having passed maximum absorption dose test.
Test system	Constant humidity & temperature chamber

Procedure

The prescriptions of AAMI TIR17 and ASTM F 1980-07 as in the following are to calculate real-time equivalent (RTE) validity period on the basis of accelerated aging temperature (Taa) and accelerated aging time (AAT), and this test has applied the specification.

AAT = 730days/AAF

AAF= $Q_{10}^{(Taa-Trt)/10}$

Q_{10}= 2.0 or 1.8

AAT : Accelerated aging time
AAF : Accelerated aging factor
Taa : Accelerated aging temperature

Trt: Real-time temperature or ambient temperature. Normally the recommended storage temperature for the product is 20~25℃. In this test, the temperature was decided at 25℃ according to the condition proposed by the applicant.

Q_{10}: Aging quotient depending on the rise or fall of aging temperature by 10℃

Most industrial standard prescribes Q_{10}=2.0, and this test has been conducted at 2.0 according to the condition proposed by the applicant.

- If the package material is high polymer system, accelerated aging temperature not exceeding 60℃ is generally recommended, but in this test, 60±2℃ has been used according to the condition proposed by the applicant.
- As the valid period of the product is 2 years (24 months), the accelerated aging time is calculated as in the following :

$AAF = 2.0^{(60-25)/10} = (2.0)^{3.5} \fallingdotseq 11.314$

AAT = 730days / 11.314 = 64.52days ≒ 65days(Accelerated aging time)

= 730 days (Real-time equivalent = 24months)

That is, if the accelerated aging time is longer than 65days under the 60±2℃ condition, the real-time equivalent validity period is over 2years. So in this test, the accelerated aging time is decided to be over 65days (real-time 2years) under the same temperature condition.

Acceptance criteria	OK – If there is no change in the package material.

4	**Seal peel test for packaging**
Purpose	Area of the thermal adhesive strength of the suture materials is measured.
Sample preparation	Prepare samples per section that have passed the control group and accelerated aging test. Sample : Cut to 15mm width.
Test system	Multi-tester, Push-pull gauge Vernier Calipers
Procedure	According to ASTM F88-07a(Technique B : Supported 90°[by Hand]), Eack tail of the specimen is secured in opposing grips and the seal remains hand-supported at a 90° perpendicular angle to the tails while the test is being conducted. Separate a grip at a rate of 200mm/min. Record the maximum seal force. Acceptance criteria	Should be maintain more than 80% of the average value of maximum seal force of the control group.

5	**Dye penetration test**
Purpose	This test method defines materials and a procedure that will detect and locate a leak equal or greater than a channel formed by a 50um (0.002in.) wire in package edge seals formed between a transparent film and a porous sheet material.
Sample preparation	Prepare 10ea per test point. The test specimen shall consist of a complete packaged device.
Test system	Small knife Dying liquid injector Magnifying glass
Procedure	< Dye agent > Wetting agent : Triton x 100 (0.5%) Indicator dye : Toluidine blue(0.05%) Inject sufficient dye penetrant into the package to cover the longest edge to a depth of approximately 5mm (0.25in.). Allow the dye penetrant solution to remain in contact with the seal edge for a minimum of 5 s and a maximum of 20. Channels will be detected within this time period but beyond 20 s, wicking of dye through the porous packaging will color the entire seal.
Acceptance criteria	There should be no Channels.

6	**Burst test**
Purpose	These test methods explain the procedure for determining the ability of packages to withstand internal pressurization.
Sample preparation	Prepare 10ea per test point. The test specimen shall consist of a complete packaged device.
Test system	Burst test System
Procedure	According to ASTM F1140-07(Test method A : Burst Test) Packages are tested in an apparatus that internally pressurizes the package until the package fails. The pneumatic supply and pressurization equipment need the capability to maintain an increasing pressure until the package bursts. The test measure is the maximum pressure detected before the package fails. 
Acceptance criteria	Should be maintain more than 80% of the average value of maximum pressure of the control group.

7	**Sterility test**
Purpose	To make sure about no bacteria in the sealed finished products.
Sample preparation	12ea(product) per accelerated test point of after sterilization.
Test system	Test tube, Incubation system, Clean room
Procedure	**Function test of culture medium** Inject 10~100 test strains or the equivalent strains, and culture them at the temperature for sterility test. The bacteria must grow within 5 days. **Microbiology growth inhibitory test** A. Inject 10~100 strains for cultural medium function test or the equivalent strains to cultural medium with a sample inside and control group cultural medium without any sample respectively. B. We cultured Soybean-casein digest broth for 7 days at 20~25℃ and checked bacterial growth at 30~35℃ of Thioglycollate Medium I and II. In case there is no bacterial growth, if the bacterial growth quantity is little or delayed compared to controlled group, it is judged to have bacteriostasis in the sample. In this case, either put an appropriate amount of inactivator that will not affect bacteria growth or increase the broth until there is no bacteriostasis. **Sterility test** A. As the sample is finished product that is nearly sterile, dissemble the sample after opening the container in the sterile condition. B. Sample was placed in Soybean-casein digest broth and Thioglycollate medium. Meidum where sample was not in has been treated as negative medium. C. We cultured Soybean-casein digest broth at 20~25℃ and Thioglycollate medium I, II at 30~35℃ for over 14 days. After checking once in 5^{th}~ 9^{th} days and observed bacterial growth twice on the final day. When reading was difficult due to unclear medium because of the sample, we transplanted to a new medium and observed for over 7 days at the same temperature.

Acceptance criteria	If bacterial growth is not detected at the test result, the medium is appropriate for sterility test, but if there are any bacteria, it is not appropriate for sterility test. If one of the following applies to the medium, void the test and start it again. ① When an error is detected in the course of test review ② Bacterial growth is recognized in the negative control group, ③ When an error is detected in the course of microbiological monitoring about sterile facility, ④ If the identified bacteria separated at a test is recognized to have come from the sterility test manipulation and material and if bacterial growth is not recognized at the retest, it is appropriate for sterility test. But if bacterial growth is recognized, it is not appropriate for sterility test.

Decision	The sample test value before and after accelerated aging test was over 80% of the value of control group, which means safety in the product control, and therefore, we judged it to be OK.				
O K					

7-1 Sterility test		Sample : Aging for Shelf life Test (No aging)		
		■ Direct method		
Cultural medium	Soybean-casein digest broth	Culturing condition	Aerophile bacteria/Fungi	22.5℃
	Thioglycollate medium I		Aerophile bacteria/Fungi	32.5℃

1. Function of medium

Strain & result / Medium	Test strains	Backteria growth
Thioglycollate medium I	*Staphylococcus aureus* (ATCC 6538) *Pseudomonas aeruginosa* (ATCC 9027) *Clostridium sporogenes* (ATCC 19404)	Yes
Soybean-casein digest broth	*Bacillus subtilis* (ATCC 6633) *Candida albicans* (ATCC 10231) *Aspergillus niger* (ATCC 16404)	

2. Bacteriostasis test

Medium	Test strains	Injection amount	Culturing	Sample medium	Control group medium	Decision
Thioglycollate medium I	*S. aureus*	10~100	At 32.5℃, aerophile culture, 7 days	G	G	No inhibiting material
	P. aeruginosa			G	G	No inhibiting material
	C. sporogenes			G	G	No inhibiting material
Soybean-casein digest broth	*Bacillus subtilis*	10~100	At 22.5℃, aerophile culture for 7 days	G	G	No inhibiting material
	Candida albicans			G	G	No inhibiting material
	Aspergillus niger			G	G	No inhibiting material

※ G: Growth. N.G.: No Growth.

3. Result of sterility test

Test method	Medium	Test start (2012.10.29.)	Middle check (2012.11.05.)	Final check (2012.11.13.)
Direct method	Thioglycollate medium I	Inoculation	N.G.	N.G.
		Inoculation	N.G.	N.G.
		Inoculation	N.G.	N.G.
	Soybean-casein digest broth	Inoculation	N.G.	N.G.
		Inoculation	N.G.	N.G.
		Inoculation	N.G.	N.G.

4. Test result : The test result showed that sterility was maintained. Attachments 5

7-2 Sterility test		Sample : Aging for Shelf life Test (12months)		
		■ Direct method		
Cultural medium	Soybean-casein digest broth	Culturing condition	Aerophile bacteria/Fungi	22.5℃
	Thioglycollate medium I		Aerophile bacteria/Fungi	32.5℃

1. Function of medium

Strain & result / Medium	Test strains	Backteria growth
Thioglycollate medium I	*Staphylococcus aureus* (ATCC 6538) *Pseudomonas aeruginosa* (ATCC 9027) *Clostridium sporogenes* (ATCC 19404)	Yes
Soybean-casein digest broth	*Bacillus subtilis* (ATCC 6633) *Candida albicans* (ATCC 10231) *Aspergillus niger* (ATCC 16404)	

2. Bacteriostasis test

Medium	Test strains	Injection amount	Culturing	Sample medium	Control group medium	Decision
Thioglycollate medium I	*S. aureus*	10~100	At 32.5℃, aerophile culture, 7 days	G	G	No inhibiting material
	P. aeruginosa			G	G	No inhibiting material

4. Test result : The test result showed that sterility was maintained. Attachments 5

9. Estimation and conclusion of test result

☐ When calculated accelerated aging test at 60±2℃ (humidity 50%) and Q_{10}= 2.0 against the samples (package material sterilized by Gamma Irradiation) in order to figure out validity period of the material corresponding to the real-time validity period 2 years (24 months) according to the prescriptions of AAMI TIR17 and ASTM F 1980-07, the accelerated aging time of the package material corresponding to 2 years (24 months) of real-time validity period was 65 days.

☐ According to standard specifications, package material test, physical test, and sterility test was adopted considering the samples and manufacturing process which have to do with the checking items of the accelerated aging test

☐ At the test before and after the accelerated aging, there was almost no difference.

☐ On the basis of the test result, we can conclude the validity time of the sample is over 2 years (24 months)

☐ The foregoing conclusion came from the accelerated aging corresponding to the real-time validity period, and so the manufacturer will have to make sure real time in the future about the packing state, physical state, and sterility state of the package material.

10. Test institution and facilities

(1) Information of test institution & Facilities

Institution	Soyagreentec Co., Ltd			
Address	900-3 Sangsin-li, Hyangnam-eup, Whaseong-si, Gyeonggi-do			
Contact Number	TEL	031-353-6999	FAX	031-353-6979
Home page	www.soyagreentec.co.kr			
Facilities	Gamma irradiator JS10000			
	Constant humidity & temperature chamber			
	Multi-tester			
	Clean Room			
	Incubator			
	Bubble emission test system, Burst test system			

(2) Certificate & Calibration of SOYAGREENTEC

Item	Specification	Certified by	Reference
ISO9001:2008	Service of Sterilization by irradiation	TUV service	Attachments 6
EN ISO13485:2003	Provision of Irradiation Service of Medical Devices	TUV service	
EN ISO11137	Sterilization of healthcare product-Requirement of validation and routine Control – Radiation sterilization	TUV service	
US FDA Registration	Contract Sterilizer	US FDA Registration	
Certificate of GMP	We hereby certify that the above manufacturer complies with Korea Good Manufacturing Practices for the product(s) listed above.	*Korea Environment & Merchandise Testing Institute *Korea Food & Drug Administration	
Calibration	Constant humidity & temperature chamber	LBBFINE. Co.,Ltd.	Attachments 7
	Multi-tester	KTL	
	Gauge Pressure Gage	KTL	
	DIGITAL VERNIER CALIPER	KTL	
	HYGRO Thermometer	KTL	

(3) Test institution & facility information

1. Introduction of SOYAGREENTEC			
Tester	Gamma Irradiator (High Performance Tote Type)		
Model	JS10000	Serial No.	IR-203
Installed company	MDS – Nordion (Canada)	Capacity	Co-60 3million Ci
Picture			
Tote	 		
Estimation of absorbed dose (Routine Dosimeter)	 Harwell Red  Amber Perspex type		

Material	Aluminum
Bore size (mm)	Width : 825 Length : 540 Height : 1500
Quantity	55
Maximum weight(kg)	360

2. Constant humidity & temperature chamber

Standard spec			
Model	FLT084S		
Function		**Standard**	
Test temperature range	0℃ - 80℃	Internal size	W800 * D600 * H850(mm)
Test humidity range	30% - 98%RH	External size	W920 * D1060 * H1840(mm)
Temperature calibration	± 0.3℃	Voltage	AC220V 60HZ 1PH
Humidity calibration	± 2.5%RH	Power	2.5KW
Temperature distribution	± 0.5℃	Weight	125kg
Humidity distribution	± 3%RH	-	-
Structure			
Internal & external material	Stainless Steel Plate(STS#304)		
Refrigerator	Completely sealed refrigerator		
Temperature Heater	Strip Wire Heater	Dehumidfier	Flat Fin Cooler
Humidity Heater	SUS#304 Pipe Heater	Water supplier	Automatic water supplier (gravitation type)
Safety device	Self-diagnosis(overheating, temperature sensor problem, low water level, overheating of heater)		
Picture			

3. DIGITAL VERNIER CALIPER			
Manufacturer	MITUTOYO	Model & Equipment No.	150mm / 0170226
Picture			
4. HYGRO Thermometer			
Manufacturer	China	Equipment No	071224A
Picture			
5. AUTOCLAVE			
Manufacturer	HANYOUNG	WATT	3KW
CAPACITY	60L	VOLT	220V 60HZ
Picture			

6-1. Multi-tester

Model	Multi Test 1
Picture	

MULTITEST 1 SPECIFICATIONS

Load capacity	1000N / 100kgf / 220lbf
Power consumption	60 watts (maximum)
Weight (stand only)	20kg (44lb)

CROSSHEAD MOTION

Travel range	500mm (19.68in)
Maximum daylight	630mm (24.80in)
Maximum headroom	510mm (20.08in)
Speed range	2.5 • 1000mm/min
Up and down settings	by toggle switch
Stand speed indicated	by potentiometer / graduated dial LED
Direction of travel indicated	LED
Limit switch repeatability	< 0.5mm (0.020in)
Over-run at top speed	< 2mm (0.08in)
Operating modes	Manual & single cycle with fast return
Reverse on alarm point	Yes, with AFG or AFTI cable
Reverse on sample break	Yes, with AFG or AFTI cable

ENVIRONMENTAL OPERATING CONDITIONS

Temperature range	5℃ to 40℃
Humidity	< 92.5%

STANDARD LOAD MEASUREMENT OPTIONS

Force Gauge and dovetail bracket	Yes
Anvil plate	Yes
S-beam loadcell, tension	
Block module & AFTI	Yes

SPECIAL OPTIONS

Increased crosshead travel	No
INCREASED CROSSHEAD DEPTH	Yes, reduced load capacity
Machine guard	Yes
Horizontal operation	Yes
Simple logging / platting PC software	Data Plot (See document M/501201)
Full computer control	Multi Test 1- i
Interoal storage of test programs	Multi Test 1- x

6-2. Push-Pull Gauge

Model	500N	Manufacturer	Mecmesin
Specification			

BFG Specification Table

Range & Resolution

Modle no	mN	N	kN	g-f	kg-f	oz-f	lb-f
BFG 50	50,000x10	50x0.01	-	5,000x1	5x0.001	180x0.05	11x0.002
BFG 200	-	200x0.05	-	20,000x5	20x0.005	720x0.2	44x0.01
BFG 500	-	500x0.1	-	50,000x10	50x0.01	1,800x0.5	110x0.02
BFG 1000	-	1,000x0.2	1x0.0002	-	100x0.02	3,500x1	220x0.05
BFG 2500	-	2,500x0.5	2.5x0.0005	-	250x0.05	9,000x2	550x0.1

Accuracy :

±0.25% of full-scale, ± least significant digit

Calibration temperature : 20℃ ± 2℃

Operating temperature : 10℃ - 35℃

Temperature shift at zero load : ±0.09% of full-scale / ℃

Output :

RS232-C ..... 8 data bits, 1 start bit, no parily

Digimatic [Mitutoyo] formal

Analogue ... • referenced to ground 1.5V at zero load , ±1V approx. for full-scale
Tension / compression

• referenced -to ve analogue output OV at zero load, ±1V approx. for full scale
Tension / compression

7. Burst test system **Bubble emission system**	
Composition	Picture
Burst test system **Bubble emission system**	1. Digital compression **KN-2000W Series**	
2. Mult **Air Compressor**	
7-1. Digital compression indicator (Model : KN-2000W Series)

Series Name		KN-2000W Series
Power supply voltage		85 ~ 264VAC 47 ~ 63Hz / 24VAC 50Hz/60Hz(Options)
Power Consumption		Approximately 8VA (264VAC 60Hz)
How to Display		4 $\frac{1}{2}$line : 7Segment LED Display. Color : Red, green, orange Available.
Character Size		W 10mm x H 17mm (PV Show)
Input Specifications		RTD : JPT100Ω, DPT100Ω, DPT50Ω, CU50Ω, CU100Ω TC : K, J, E, T, L, N, U, R, S, B, C(w5), PL II Voltage Input : ±1.0000V, ±50.00mV, ±200.0mV, -1.000V ~ 10.000V Current input : 4.00 ~ 20.00mA, 0.00 ~ 20.00mA
Digital Input		Of three functions (Specify any ZERO, Disable alarm maintenance, PV hold function) Enabled by selecting one feature.
Auxiliary Output	Alarm Output	2 points: Relay contact capacity 250VAC 3A 1c 4 points: Relay contact capacity 250VAC 1A 1a
	Transport Output	ISOLATED DC4 ~ 20mA(PV Transport) Load resistance 600Ω Below
	Communication output	RS 485 modbus
Display Accuracy		[±0.2% F•S] ± 1Digit (25℃ ± 5℃) [±0.3% F•S] ± 1Digit (-10℃ ~ 20℃, 30℃ ~ 50℃) However, less than -100 ℃ thermocouple input [± 0.4% F • S] ± 1Digit ※ TC-T, TC-U at least ± 2.0 ℃
Setting method		Set using the front keys. Using 485communication.
Alarm Hysteresis		ON/OFF Set intervals (1~999Digit)
Input sampling cycle		Analog Input : 100ms. Temperature sensor input : 250ms
Function		Alarm, self-diagnostic function, peak hold function, digital input, input special function capability Enter the calibration, lock, display scale, output-scale features, the ability to change the display color.
The internal voltage		2000VAC 50/60Hz 1 minute (Between the input terminal and power terminal)
Internal vibration		5 ~ 55Hz (cycles 1 minute) Amplitude 0.75mm X, Y, Z Directions for two hours each.
Relay Life	2point	Mechanical : More than 10 million times, Electrical : More than 100,000 times (250VAC 3A resistive load)
	4point	Mechanical : More than 20 million times, Electrical : More than 500,000 times (250VAC 1A resistive load)
Insulation resistance		100M Ω or more (500VDC Per megabyte)
Internal noise		Square-wave noise by noise simulator (pulse-side 1us) ± 2KV
Compensation blackout		10 years (Approximately)
Ambient temperature using		-10 ~ 50℃ (Without freezing)
Storage Temperature		-20 ~ 60℃ (Without freezing)
Humidity using		35 ~ 85%RH
Weight		200g(Approximately)

7-2. Multi Air Compressor

Model : NCT011-T3 Manufacturer : Oillesscompressor Co., Ltd.

SPECIFICATIONS

Sterility Test Report

Requisition day : Oct. 29. 2012.

Sample Information	: 40kGy Irradiation (Aging for shelf life test - No aging)
Customer	: KM CORPORATION.
Address	: 348-1, Boche, Miyang, Anseong, Gyeonggi, Korea.
Products Name	: Sterilized Non-Woven Wiper
Products Batch No.	: HH-20, HH-14, HH-04
Total test sample size	: 6ea

Test method	: ISO 11737-2 (E)	
Test period	: Oct. 29. 2012. – Nov. 13. 2012.	
Laboratory Condition	: Temperature 20.4 ℃, Humidity 41.7 %	
Media	Thioglycollate medium I	Tryptone soy Broth
Incubation Temperature	32.5 ℃	22.5 ℃
Incubation	: 14 day (336 hours)	

Result

Test Item	Positive(+)	Negative(-)
Sterility	0 unit	6 unit

*ATTACHMENTS : Post – sterilization count report
*USAGE : QUALITY CONTROL
*NOTE :
1. This test report shall be used within the purpose of its defined usage.
2. The results have been made for the sample presented by the client, and it is the decision of the client naming the presented sample.

Nov. 13. 2012.

Certificate of Analysis

1.08191.5000 Fluid thioglycolate medium for microbiology

Batch VM242391

	Batch Values
Appearance	
clearness	clear
colour	yellowish
pH-value (25 °C)	7.2

Typical composition (g/litre): Peptone from casein 15.0; Yeast extract 5.0; D(+)Glucose 5.5; L-Cystine 0.5; Sodium chloride 2.5; Sodium thioglycolate 0.5; Resazurin sodium 0.001; Agar Agar 0.75.

Growth promotion test in accordance with ISO 11133 and the harmonised method of EP, USP and JP.

	Batch Values
Inoculum on reference medium	
Clostridium perfringens ATCC 13124	38
Clostridium sporogenes ATCC 11437	99
Clostridium sporogenes ATCC 19404	98
Bacillus subtilis ATCC 6633	26

Certificate of Analysis

Product Name : BOTTLE BACTO TSB CASEIN MED 500G
Catalog Number : 211825 **Manufacture Date :** 2010/09/23
Batch Number : 0286473
Expiration Date : 2015/09/30

01. Dehydrated Medium Appearance: Light beige, free-flowing, homogeneous
02. Solubility: 3% solution, soluble in distilled or deionized water
03. Solution Appearance: Light amber, clear
04. Medium was tested per European (EP) and United States Pharmacopeia (USP) Growth Promotion requirements. Tubes were inoculated with < 100 CFUs. Tubes were incubated aerobically for 3 days and up to 5 days for (*) organisms and gave cultural responses as indicated.

TEST ORGANISMS	ATCC®	RECOVERY	TEMPERATURE	INCUBATION
*Asperigillus brasiliensis	16404	growth	20-25˚C	Up to 5 days
Bacillus subtilis	6633	growth	30-35˚C,20-25˚C	Up to 3 days
*Candida albicans	10231	growth	20-25˚C	Up to 5 days
Escherichia coli	8739	growth	30-35˚C	Up to 3 days
Pseudomonas aeruginosa	9027	growth	30-35˚C	Up to 3 days
Salmonella typhimurium	14028	growth	30-35˚C	Up to 3 days
Staphylococcus aureus	6538	growth	30-35˚C	Up to 3 days

05. Cultural Response: Medium was prepared per label instructions. Tubes were inoculated with the test organisms and incubated at the temperatures specified for 18-48 hours, or up to 72 hours if necessary.

TEST ORGANISMS	ATCC®	TEMPERATURE	RECOVERY
Neisseria meningitidis	13090	30-35˚C	fair to good
Staphylococcus epidermidis	12228	30-35˚C	good
Streptococcus pneumoniae	6305	30-35˚C	good
Streptococcus pyogenes	19615	30-35˚C	good

06. Residual Solvents (CPMP/ICH/283/95): Typical Analysis for Tryptic Soy Broth indicates that there is less than 5000 ppm of Acetone. No other solvents were detected during analysis.

Sparks MD 21152-0999 US

Certificate of Analysis

Product Name : BOTTLE BACTO TSB CASEIN MED 500G
Catalog Number : 211825 **Manufacture Date :** 2010/09/23
Batch Number : 0286473
Expiration Date : 2015/09/30

Animal Source	Country of Origin	Tissue Category BIC	SIC	ABC
Porcine	USA	III	III	B
Bovine	Australia	IV	IV	C
Bovine	New Zealand	IV	IV	C
Porcine	Canada	III	III	B

The Batch Number on this certificate is synonymous with the Lot Number shown on the product label.

BD Diagnostic Systems (BDDS) is an ISO 13485:2003 and ISO 9001:2008 Registered facility. BDDS products are manufactured in facilities registered with the United States Food and Drug Administration (FDA), and are regulated by the FDA's Quality System Regulations (QSRs). This product met BDDS stringent quality standards at time of batch/lot release. Any test results reported on this certificate were obtained at time of release.

BD Diagnostic Systems' Certificates of Analysis (COA) typically are set up to contain animal origin information for finished products manufactured using materials of animal origin. The animal origin information may be contained in the animal source table and/or in one or more of the additional paragraphs found on the COA. This information is a compilation of animal origin data from the individual lots of raw materials used to manufacture the batch of BD Diagnostic Systems (BDDS) finished product for which the COA was created.

At the time the BDDS Certificate of Analysis is created and sent to the Internet website address at http://www.bd.com/regdocs/, the animal origin information as provided to BDDS by its suppliers is pulled into the certificate as it is created by the BDDS automated certificate system.

At times, suppliers notify BDDS of new and/or additional information they have received from their raw material suppliers that modifies the animal origin information for lots previously provided to BDDS. When this situation occurs, BDDS updates the animal origin information in the automated certificate system, recreates the affected finished product COAs for batches within expiration date, and sends them to the Internet website where they replace the prior certificate and are immediately available to customers.

Customers enrolled in BD Diagnostic Systems' Automated Change Notification Program will be notified of the changes described above.

STABILITY TEST CHAMBER VALIDATION
(안정성시험기 VALIDATION)

Date (일자)	: 2012. 03. 07. ~ 08.
Purpose (목적)	: To ensure the reliability of the product set as the storage conditions are maintained to verify. (제품의 안정성을 확인하기 위해 설정된 보관조건대로 유지되는지 검증한다.)
Target (대상)	STABILITY TEST CHAMBER (안정성시험기) Model(모델) : FLT - 084S Manufacturer (제조회사) : LABFINE, INC. Manufacturing number (제조번호) : 080324
Item (항목)	: Temperature and humidity distribution test (온도, 습도 분포 시험) Measuring Machines (측정기기) : TR320 (DICKSON) Verification and correction date (확인 및 정정일자) : 2011.12.26. Next Verification and correction date (차기 검·교정일자): 2012.12.25.
Result (결론)	: The Stability Test Chamber has been proven to be working well. (안정성시험기가 잘 작동됨이 증명되었다.) - Temperature distribution : Set temperature of ± 2 ℃ (온도분포 : 설정온도의 ±2℃) - Humidity Distribution : Set humidity of ± 5% Rh (습도분포 : 설정온도의 ±5%Rh)
Attachments (첨부)	: Stability Test Chamber Validation data (안정성시험기 밸리데이션 자료) TR320 Verification and correction certificate (TR320 의 검·교정 성적서)
Remarks (비고)	: Operation, temperature and humidity distribution uniformity of Stability Test Chamber has been confirmed. (안정성시험기의 작동 및 온도, 습도 분포의 균일성이 확인되었다.

Table 3—General guide to radiation stability of materials

MATERIALS	RADIATION STABILITY	COMMENTS
Thermoplastics		
ABS	Good	High impact grades are not as radiation resistant as standard impact grades.
Acrylics (PMMA)	Fair–Good	
Cellulosics		Esters degrade less than does cellulose.
Esters	Fair	
Cellulose acetate propionate	Fair	
Cellulose acetate butyrate	Good–Fair	
Cellulose, paper, cardboard	Fair–Good	
Fluoropolymers		When irradiated, PTFE and PFA are significantly damaged. The others show better stability. Some are excellent.
Polytetrafluoroethylene (PTFE)	Poor	
Perfluoro Alkoxy (PFA)	Poor	
Polychlorotrifluoroethylene (PCTFE)	Good–Excellent	
Polyinyl fluoride (PVF)	Good–Excellent	
Polyvinylidene fluoride (PVDF)	Good–Excellent	
Ethylene-Tetrafluoroethylene (ETFE)	Good	
Fluorinated ethylene propylene (FEP)	Fair	
Liquid Crystal Polymer (LCP)	Excellent	Commercial LCPs; Natural LCPs not stable.
Polyacetals	Poor	Irradiation causes embrittlement. Color changes have been noted (yellow to green).
Polyamides (Nylon)	Good	Nylon 10,11,12,6-6, more stable than 6. Nylon film and fiber are less resistant.
Polycarbonate	Good–Excellent	Yellows—mechanical properties not greatly affected; color-corrected radiation formulations are available.
Polyesters	Good–Excellent	PBT not as radiation stable as PET resins.
Polyethylene, various density	Good–Excellent	HD not as stable as MD and LD.
Polyimides	Excellent	
Polyphenylene sulfide	Excellent	
Polypropylene, natural Polypropylene, stabilized	Poor–Fair	Physical properties greatly reduced when irradiated. Radiation stabilized grades, utilizing high Mw and co-polymerized and alloyed with polyethylene, should be used in most radiation applications; High dose rate electron beam may reduce oxidative degradation.
Polystyrene	Excellent	
Polysulfone	Excellent	Natural material is yellow.
Polyurethane	Excellent–Good	Aromatic discolors; polyesters more stable than esters. Retains physical properties.
Polyvinylchloride (PVC)	Good	Yellows—antioxidants and stabilizers prevent yellowing. High molecular weight organotin stabilizers improve radiation stability: color-corrected radiation formulations available.
Polyvinylchloride-Polyvinylacetate	Good	Less resistant than PVC.
Polyvinylidene dichloride (Saran)	Good	Less resistant than PVC.
Styrene/Acrylonitrile (SAN)	Good–Excellent	

Table 3—General guide to radiation stability of materials (continued)

MATERIALS	RADIATION STABILITY	COMMENTS
Elastomers		
Butyl	Poor	Friable, sheds particulate.
Chlorosulfonated polyethylene	Poor	
EPDM	Excellent	
Natural rubber	Good–Excellent	
Nitrile	Good–Excellent	Discolors.
Polyacrylic	Poor	
Polychloroprene (neoprene)	Good	Discolors; the addition of aromatic plasticizers renders the material more stable to irradiation.
Silicone	Good	Phenyl-methyl silicones are more stable than are methyl silicones. Platinum cured silicones are superior to peroxide cured silicones. Full cure during manufacture can eliminate most post-irradiation effects.
Styrene-butadiene	Good	
Urethane	Excellent	
Thermosets		
Allyl diglycol carbonate (Polyester)	Excellent	Maintains its excellent optical properties after irradiation.
Epoxies	Excellent	All curing systems.
Phenolics	Excellent	Includes the addition of mineral fillers.
Polyesters	Excellent	Includes the addition of mineral or glass fibers.
Polyurethanes Aliphatic Aromatic	 Excellent Good–Excellent	 Darkening can occur. Possible breakdown products could be derived.

1. Introduction

The manufacturer must supply the product in the process of sterilization of medical devices for the possibility of microbial contamination should be minimized.

Produced before the sterilization, some microorganisms are more likely to be contaminated, the contaminated microbes may be fewer. In this sense, sterilization of medical devices that have been contaminated by bacteria disabled, non-sterile products are sterilized product to change.

Microorganisms associated with a particular sterilization process, the bacterial viability and resistance levels, and sterilization of microbial survival during the period is determined by the environment.

Medical device design / development, production, installation and service standards for quality management are presented in the ISO 13485. ISO 13485 and the subsequent inspection and testing process to determine the final outcome cannot be sufficiently specific manufacturing process, a "special process" is defined as. Therefore, the sterilization process, product inspection and testing process to determine the efficacy, because the process that corresponds to the special process is one example. For this reason, sterilization process to go through a verification process before use and regularly monitor performance • to oversee the process at the same time, and related equipment will also continue to be maintained. In addition, the input of raw materials and / or component level of microbial reproduction (viable), the subsequent storage conditions, and product manufacturing, assembly and packaging, including environmental control unit for numerous elements and care must be taken care of.

This information, EN ISO11137: 2006 validated by the standards of performance will be evaluated and irradiated companies [SOYAGREENTEC CO., LTD(EN ISO11137, ISO9001, ISO13485 certified and registered with the FDA, Ministry of Health, Labour and Welfare(JAPAN) to be sterilized in business units.)].

2. Purpose & Scope

The research data for medical products **KM CORPORATION**, Gamma sterilization of cutting instruments and ISO 9001:2008 & ISO 13485:2003, EN ISO 11137:2006 standard radiation sterilization and validation requirements according to the regulations (SYS-PQ-101), and daily management of radiation sterilization Regulations (SYS-PP-101) based on radiation sterilization of medical devices for the purpose of verification is a process.

This research coverage of gamma-sterilization of medical equipment verification, process control and supervisory standards for work-related regulations are detailed. Through the mechanism of irradiation devices using Co^{-60} radioactive isotope used in the continuous and batch type gamma irradiator model JS-10000 has been applied for.

This study validated data for radiation sterilization, and pre-production steps to control and quality assurance system is not about technology. In addition, work processes and related research facilities for radiation protection standards are not addressed.

This report is not available to the customer in addition to sales

3. Personnel

Test the validity of this information is in charge of the sterilization from an international certification authority gamma sterilization, quality and validity of the test EN ISO11137-1: 2006 accredited international specifications (SOYAGREENTEC Co., Ltd.) repeated in the practice and theory, appropriate training was made up characters.

5. Definitions

5.1. Absorbed dose

1) Dose : Quantity of ionizing radiation energy imparted per unit mass of a specified material

*NOTE 1. The unit of absorbed dose is the gray (Gy) where 1 Gy is equivalent to the absorption of 1 J/kg.

*NOTE 2. For the purposes of this part of ISO 11137, the term dose is used to mean "absorbed dose".

5.2. Bioburden : population of viable microorganisms on or in the product and/or sterile barrier system

5.3. Biological Indicator : test system containing viable microorganisms providing a defined resistance to a specified sterilization process

5.4. Calibration : set of operations that establish, under specified conditions, the relationship between values of a quantity indicated by a measuring instrument or measuring system, or values represented by a material measure or a reference material, and the corresponding values realized by standards. [VIM:1993, definition 6.11]

5.5. Change Control : assessment and determination of the appropriateness of a proposed alteration to product or procedure [ISO/TS 11139:2006]

5.6. Correction : action to eliminate a detected nonconformity

*NOTE 1. A correction can be made in conjunction with corrective action (3.7).

[ISO 9000:2005]

5.7. Corrective Action : action to eliminate the cause of a detected nonconformity or other undesirable situation

*NOTE 1. There can be more than one cause for a nonconformity.

*NOTE 2. Corrective action is taken to prevent recurrence whereas "preventive action" (3.24) is taken to prevent occurrence.

*NOTE 3. There is a distinction between correction and corrective action. [ISO 9000:2005]

5.8. *D* value : *D*10 **value** time or radiation dose required to achieve inactivation of 90 % of a population of the test microorganism under stated conditions

*NOTE 1. For the purpose of the ISO 11137 series, the *D* value refers to the radiation dose necessary to achieve the 90 % reduction. [ISO/TS 11139:2006]

5.9. Development : act of elaborating a specification [ISO/TS 11139:2006]

5.10. Dose Mapping : measurement of dose distribution and variability in material irradiated under defined conditions

5.11. Dosimeter : device having a reproducible, measurable response to radiation, which can be used to measure the absorbed dose in a given system [ISO/TS 11139:2006]

5.12. Dosimetry : measurement of absorbed dose by the use of dosimeters

5.13. Establish : determine by theoretical evaluation and confirm by experimentation [ISO/TS 11139:2006]

5.14. Fault : one or more of the process parameters lying outside of its/their specified tolerance(s) [ISO/TS 11139:2006]

5.15. Health Care Product(s) : medical device(s), including *in vitro* diagnostic medical device(s), or medicinal product(s), including biopharmaceutical(s) [ISO/TS 11139:2006]

5.16. Installation Qualification (IQ) : process of obtaining and documenting evidence that equipment has been provided and installed in
accordance with its specification [ISO/TS 11139:2006]

5.17. Irradiation Container : holder in which product is transported through the irradiator

*NOTE 1. The holder can be a carrier, cart, tray, product carton, pallet or other container.

5.18. Irradiator Operator : company or body responsible for irradiation of product

5.19. Maximum Acceptable Dose : dose given in the process specification as the highest dose that can be applied to a defined product without compromising safety, quality or performance

5.20. Specification : approved document stipulating requirements

5.21. Specify : stipulate in detail within an approved document [ISO/TS 11139:2006]

5.22. Sterile : free from viable microorganisms [ISO/TS 11139:2006]

5.23. Sterility : state of being free from viable microorganisms

*NOTE 1. In practice, no such absolute statement regarding the absence of microorganisms can be proven (see **sterilization**) 3.39. [ISO/TS 11139:2006]

5.24. Sterility Assurance Level (SAL) : probability of a single viable microorganism occurring on an item after sterilization

*NOTE 1. The term SAL takes a quantitative value, generally 10^{-6} or 10^{-3}. When applying this quantitative value to assurance of sterility, an SAL of 10–6 has a lower value but provides greater assurance of sterility than an SAL of 10^{-3}.

[ISO/TS 11139:2006]

5.25. Sterilization : validated process used to render product free from viable microorganisms

*NOTE 1. In a sterilization process, the nature of microbial inactivation is exponential and thus the survival of a microorganism on an individual item can be expressed in terms of probability. While this probability can be reduced to a very low number it can never be reduced to zero

[see **"sterility assurance level"** (3.38)]. [ISO/TS 11139:2006]

5.26. Sterilization Dose : minimum dose to achieve the specified requirements for sterility

5.27. Sterilization Process : series of actions or operations needed to achieve the specified requirements for sterility

6. Product Qualification

6.1. General

6.1.1. Product Name : Sterilized Non-Woven Wiper

6.1.2. Model Name : KM-6612L

6.1.3. Device Grade : Class II

6.1.4. SAL : 10^{-6}

6.2. Evaluation of Device materials

*Raw materials

No.	Name	Raw material	Note
1	Polyester	Polyester 55%	-
2	Cellulose	Cellulose 45%	-

Attachment 1 : Product information

6.3. Evaluation of Sterile Barrier

Composition	Contents		Picture
1st Packaging	Material	: LOW-DENSITY POLYETHYLENE(LDPE)	
	Dimension	: 255 mm(W), 290 mm(L), 5 mm(H)	
	Package Type	: 10 ea	
	Weight	: 14.8 g	
2nd Packaging	Material	: LOW-DENSITY POLYETHYLENE(LDPE)	
	Dimension	: 320 mm(W), 360 mm(L), 35 mm(H)	
	Package Type	: 25 ea	
	Weight	: 25.0 g	
3rd Packaging	Material	: LOW-DENSITY POLYETHYLENE(LDPE)	
	Dimension	: 345 mm(W), 370 mm(L), 35 mm(H)	
	Package Type	: 100 ea	
	Weight	: 26.5 g	

6.3.1. Carton Packaging

Material	: Paper	Picture
Dimension	: 340 mm(W), 315 mm(L), 320 mm(H)	
Package Type	: 8 outer bags / ctn	
Weight	: 5,300 (g)	
Density	: 0.155 g/cm^3	

6.4. Establishment of Maximum dose

	Contents	Test method
Establishment of Maximum dose	Maximum acceptable dose	40 kGy Radiation Source : Co^{-60}
Result	Manufacturer's(**KM CORPORATION**) product safety evaluation of the material up to 40 kGy dose of radiation is not affected by packaging material, and the set was evaluated for validity *Consultation : Evaluation of gamma sterilization for shelf life of 36 months Gamma irradiation for sterilization can't mark a change in the quality, safety and performance of the materials. So, they can be used in most sterile device applications according to table of Appendix A. "Examples & Guidance of radiation stable material(in sterilizing dose range)" in AAMI TIR 17	

* Technical Information Report. AAMI TIR 17 : 2008 - Compatibility of materials subject to sterilization

Attachment 2 : Guideline for selection of Device and packaging materials

6.5. Establishment of Sterilization dose

6.5.1. Sterility assurance level : SAL

Value : SAL 10^{-6}

6.5.2. Product to represent a product family

- ● the master product
- ○ an equivalent product
- ○ a simulated product
- ○ product rejected

(see ISO 11137-2:2006 4.3, 5.3.2)

6.5.3. Sample item portion: SIP

- ● an entire product : SIP=1
- ○ a selected portion of product (SIP :)

Value : The entire product was used testing.

6.5.4. The selecting method for determining the sterilization dose

- ○ Method 1 : dose setting using bioburden information
- ● Method VD_{max}^{25} : Substantiation of 25 kGy as the sterilization dose
  - ■ multiple production batches
  - □ single production batch

6.5.5. Micro-biological testing method

*Test of biobuden : ISO 11737-1

*Test of sterility : ISO 11737-2

6.5.6. VD_{max}^{25} substantiation : SIP ≤ 1.0

6.5.6.1. Stage 1 : Number of product items

Value : 40

10 from each of 3 batches for bioburden determination plus 10 for verification dose experiment.

6.5.6.2. Overall SIP average bioburden

Value : 6.0

SIP bioburdens of 5.7, 4.9 and 7.4 were observed for the three batches tested for an overall SIP average bioburden of 6.0.

6.5.6.3. Stage 2 : Overall average bioburden

Value : 9.72

*Correction factor : 1.62 (recovery efficiency)

The average bioburden for the entire product of each of the batches is calculated:

9.23	/1	=	9.23
7.94	/1	=	7.94
11.99	/1	=	11.99

The overall average bioburden is 9.72. None of the individual batch average bioburdens was twice the overall average bioburden of 9.72, therefore the overall average bioburden is used to calculate the verification dose.

Attachment 3 : Bioburden test report

6.5.6.4. Stage 3 : Verification dose

Value : 7.1 kGy

Use table 9 to obtain the verification dose. A bioburden of 9.72 is not listed in the table, so the next higher bioburden of 10.0 is used. The VD_{max}^{25} dose for an SIP of 1 is calculated using the following equation.

SIP VD_{max}^{25} = (SIP = 1,0 VD_{max}^{25}) + (SIP dose reduction factor × log SIP) [Equation (10)]

SIP verification dose = 7.1 kGy + (3.57 × log1) = 7.1 kGy

6.5.6.5. Stage 4 : Perform Verification dose experiment

Select 10 product items from a single batch of product. The 10 product items for the performance of Stage 4 may be selected from one of the batches for which a bioburden determination was carried out in Stage 4 may be selected from a fourth batch manufactured under conditions that are representative of normal production.

6.5.6.6. Verification dose acceptance criteria

The highest dose to the measured dose may not exceed $VDmax^{25}$ by more than 10%. If the arithmetic mean of the highest and lowest doses of measured doses is < 90% of $VDmax^{25}$, the verification dose experiment may be repeated. If this mean dose is < 90% of $VDmax^{25}$ and, on performance of the test of sterility, acceptable results are observed, the verification experiment need not be repeated.

Value : 7.20 kGy(min) ~ 7.29 kGy(max)

Verification dose	Dose range	Specified Dose		Dosimetry Results	
7.1 kGy	± 10 %	D_{min}(kGy)	6.39	D_{min}(kGy)	7.20
		D_{max}(kGy)	7.81	D_{max}(kGy)	7.29

Attachment 4 : Gamma Irradiation for Verification Experiment

6.5.6.6. Stage 5 : Sterility testing

Value : 0 Positive

Result	Purview	Interpretation of result
0	0 or 1 positive	substantiate 25 kGy as the sterilization dose
	2 positive	Confirmatory verification dose experiment : the verification dose experiment shall be repeated.(stage 3, 4, 5)
	More than two positive	Do not accept verification if there are than two positive tests of sterility.

Subject the product items(Stage 4) individually to a test of sterility in accordance with ISO 11737-2:2009 and record the number of positive tests of sterility.

Accept verification if there is no more than one positive test of sterility from the 10 tests carried out and there by substantiate 25 kGy as the sterilization dose.

Attachment 5 : Sterility test report

6.6. Specifying the maximum acceptable dose and the sterilization dose

Value : 25 kGy ~ 40 kGy

The higher the dose deviation of the maximum allowable dose in case, the product dose mapping results are up to the value of the absorbed dose values were less than 40 kGy. Therefore, the safety of products and materials identified to determine the maximum dose of 40 kGy

ISO 11737-1 the average determined by means of microbial contamination (9.72 CFU / unit), and 7.1 kGy dose is about this verification. Sterility test samples as determined by test dose (10ea) after gamma irradiation and sterility test results were all negative results ISO 11137-2: 2006 (E) in the Substantiation of 25 kGy as a sterilization dose [AAMI TIR 27: $VDmax^{25}$ Method (verification experiment performed on ten samples at $SAL10^{-6}$) is proved along.

7. Installation Qualification

7.1. Contract sterilizer information

7.1.1. Contract Sterilizer : SOYAGREENTEC CO., LTD.

7.1.2. Address : 900-3, Sangsin-Ri, Hyangnam-Eup, Hwasung-Si, Kyoengki-Do, Korea.

7.1.3. Certificate

ISO 9001 & ISO 13485 Quality System

EN ISO 11137 Sterilization of healthcare product-Requirement of validation and routine Control – Radiation sterilization

FDA Registration

Korea Food & Drug Administration, Certificate of GMP

Ministry of Health, Labour and Welfare(JAPAN)

Attachment 6 : Certificate of Soyagreentec Co., Ltd.

7.1.4. Responsibilities

Was stipulated at the Agreement for contract sterilization

7.2. Information of gamma irradiation

7.2.1. Irradiator specifications and characteristics

* Model : JS-10000 (High Performance Tote Irradiator)
* Serial No. : IR203
* Manufacture of Gamma irradiation : MDS-Nordion International INC.
* Date of manufacture : 2000. 1

Attachment 7 : JS-10000 Brochure

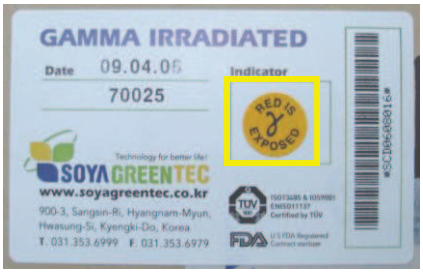
7.2.2. Distinction control of sterilized products

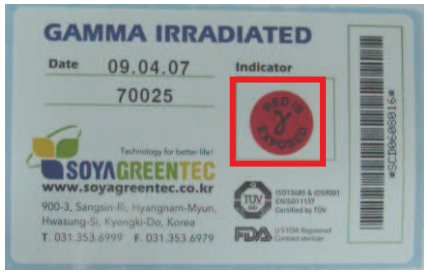
Description of premises in Soyagreentec Irradiation Facility, products to be irradiated are loaded at right side and irradiated products are loaded at left side from direction of irradiation room and its products are separated from each other by barrier.

Attachment 7 : Fig. 1. JS-10000 Lay out, Fig. 2. Factory Layout

*Distinction methods between sterilized and non-sterilized product

*Chemical indicator : dots – sticker type

Yellow → Red color change	
Non-Irradiated	Irradiated
	




Attachment 8 : Certificate of Self-adhesive Gamma indicator

7.2.3. The construction and operation of any associated conveyor system

*Source Pass

All of the 44 running tote are located at right and left, upper and lower position around Co^{-60} source. Each tote orbited to keep movement through 44 positions in order to increase the absorbed dose uniformity. Irradiation will begin when loaded tote enter into irradiation room by conveyer and first entered continuously like this order. All of these operation are controlled by PLC.

Attachment 7 : Source pass (fig. 3-1, 3-2)

* Timer and set

-Master timer

Irradiation time will decide by soured strength and density of product to be irradiated in order to irradiate optimum dose. Irradiation time could be adjusted by Master Time Set. Master time is from beginning time of source pass to next beginning time of source pass.

-Over dose timer

Over Dose Timer will set automatically 10 sec. long by Master time setting. Overdose timer will operate if source pass did not work when Master time elapsed 10 sec. So that source will down and operation will stop to prevent over irradiation of product.

7.2.4. Irradiation container (Tote)

Tote made of specific aluminum which hold adequate gamma ray penetration and its dimension is 830mm × 530mm ×1,500mm(width, length, height) and available up to 380kg loading

Attachment 7 : Tote - Irradiation container (Fig. 5-1, 5-2)

7.2.5. Load and Unload

At loading position, tot will up by foot switch and load safely. Product loading procedure will handle by loading pattern with attachment of dosimeter at certified minimum absorbed dose position which was recertified by dose mapping and will attach more dosimeter at appropriate for tote interval when different items will irradiate continuously and evaluate the

Attachment 7 : Fig. 4. load and Unload area

7.2.6. Research Loop

Research Loop is used to determine the optimum dose of each item before mass irradiation.

Attachment 7 : Fig. 5-3. Research Loop

7.2.7. Source verify daily strength and Source capsule for position

*Source information

-Radioactive Source : Cobalt-60

- Manufacture & Model : MDS-Nordion (C-188)

-1.17Mev 100%, 1.33Mev 100%

- Half –life : 5.26year

- Designed capacity : 3,000,000 Ci

* Source and Source rack

Irradiation room have 2 of source rack, 12 module installed at one rack and 42 source installed at one module. Active area of one source rack is 1.55m × 1.83m and its will be located at center of tote loaded in irradiation room when facility is running.

Attachment 7 : Fig. 6. Source and Source rack

7.2.8. Manner of operating the irradiator

7.2.9. Operation by the licensed personal

Radiation supervised operator(RSO), Authorized Operators.

7.2.10. Normal Start-up

In the equipment room, At the control console, In the radiation room.

7.2.11. Means to identify disorder : Alarm system, Video Display.

7.2.12. Maintenance frequency

weekly, monthly, quarterly, yearly regularly inspection and record.

8. Operational Qualification

8.1. Standard Operation Procedure

* Radiation driving instructions (SYS-IP-103)
* Radiation Facility inspection standards (SYS-SP-104)

8.2. Standard Process

Procedure of irradiation sterilization : Radiation sterilization and routine administrative regulations (SYS-PP-101)

8.3. Equipment calibration

8.3.1. Dosimetry system

8.3.2. Cycle setting-timer for irradiation

Sources the strength of the mind set to periodically change

Attachment 9 : Certificate of calibration

8.4. Irradiator Dose Mapping

8.4.1. Dose mapping for OQ is carried out to characterize the irradiator with respect to the distribution and reproducibility of dose and to establish the effect of process interruption on dose. Dose mapping should be performed by placing dosimeters in an irradiation container filled to its design limits with material of homogeneous density. This density should be within the density range for which the irradiator is to be used. At least two dose mapping exercises should be carried out, one with material close to the lower limit of the density range for which the irradiator is intended to be used and another with material close to the upper limit of this range.

8.4.2. A sufficient number of irradiation containers (at least three) should be dose mapped at each chosen density to allow determination of variability of dose and dose distribution between containers. The detail and number of replicate dose mapping exercises required will be influenced by the amount of knowledge gained from previous OQ dose mapping exercises on the same or similar irradiators. This means that a greater number of replicate exercises might be required for a new installation than for qualification dose mapping exercises after replenishment of sources.

8.4.3. Writing dose table or calculating transitdose must be performed for verification

influence of process stopping. It should be confirmed dose measurement whether carried-dose calculation is suitable. Effect of process stopping evaluate compare writing result of dose table at normality process condition. In order to accurately assess must be made several times to process stopping

8.4.4. Information for material of homogeneous density

Material	Corrugated Cardboard		
Size(W*L*H) mm	815*0.7*1,525	Radiation room Temperature(℃)	
		15.0	
Unit weight (kg)	1	Radiation room Humidity(%)	
		25.0

8.4.6. Result for Irradiator Dose Mapping

Distribution Dose : Fitness

Source before and after increasing the dose did not show any significant difference in the distribution.

Attachment 10 : Irradiator Dose Mapping Report

9. Performance Qualification

9.1. Product Loading Pattern

Loading of the product the way the size of the product determined in accordance with the size and the Tote, and according to the density of the product by considering the uniformity of the absorbed dose, radiation dose and working up to the minimum dose is loaded to be included in the category of

Material	: Paper	Picture
Dimension	: 340 mm(W), 315 mm(L), 320 mm(H)	
Package Type	: 8 outer bags / ctn	
Weight	: 5,300 (g)	
Loading Density	: 0.155 g/cm^3	

* Products direction : 8 C/T loading(direction : no connection)

*Products Loading Pattern : **Attachment 11 : Master Process Specification**

* TOTE Size : **Attachment 7**

* Irradiation container (Tote)

Tote made of specific aluminum which hold adequate gamma ray penetration and its dimension is 830mm × 530mm ×1,500mm(width, length, height) and available up to 380kg loading

9.2. Product Dose mapping Study

Replicate dose mapping exercises are carried out in order to obtain information on variability of doses caused by irradiator variation, product variation and dosimeter uncertainty. A minimum of three exercises – each done using a separate irradiation container – is recommended in order to obtain statistically valid data; confidence in the measured values is, however, increased by using a larger number of exercises. For replicate dose mapping exercises, it could be sufficient to place dosimeters only in areas of dose extremes, rather than carry out a full dose mapping exercise.

9.2.1. The expected min/max dose zone

* min dose zone : 26.0 kGy (M5)
* max dose zone : 32.8 kGy (M8)

9.2.2. Product dose mapping

The data from dose mapping can be analyzed to calculate the ratios of minimum dose to dose to dose at the monitoring position and maximum dose to dose at the monitoring position for each exercise. A calculation of the respective mean values, together with their standard deviations, can then be made. The mean minimum to monitor dose ratio and its uncertainty, combined with the uncertainty of the dosimeter system, can be used to select a monitor dose that will ensure that, in subsequent processing, the minimum dose exceeds the sterilization dose with a defined confidence level.

***Result**

Dose Measurement						
Specified Dose(kGy)		Product dose mapping of Totes (Location)				Location
		Dose Map 1	Dose Map 2	Dose Map 3	Average	
D_{Min}	25	25.9	25.9	26.1	26.0	M5

10. Review and approval of validation

10.1. Product

Material	: Paper	Picture
Dimension	: 340 mm(W), 315 mm(L), 320 mm(H)	
Package Type	: 8 outer bags / ctn	
Weight	: 5,300 (g)	
Density	: 0.155 g/cm^3	

10.2. Master Process Specification

1 Tote : 8 Carton

10.3. Maximum acceptable dose

40 kGy

10.4. Sterilization dose

25 kGy

10.5. For product that support microbial growth, the maximal interval of time between manufacture and completion of irradiation. The growth of the microbe is not an occurrence possibility and the set of time interval between manufacture and irradiation completing is not meaning.

10.6. Routine dosimeter monitoring positions

M-5 (minimum dose)

(9.2.3 see)

11. Routine monitoring and control

11.1. Warehousing of Products

Management department confirm the same as product quantity and those recorded in that from the customer "Request for Gamma irradiation". Product loaded into inspection waiting areas. Receive the approval of Quality control supervisor.

11.2. Incoming inspection

Write the Product checklist, after packaging, quantity, weight, and contents are examine. Product move to non-irradiation area and storage after Receive the approval of Quality control supervisor. In such cases, broken and the information of the contents is incorrect, move to unsuitable area. And process after discussion with customer.

11.3. Sterilization process control

11.3.1. Check lists

11.3.1.1. Product of sterilization request

1) Product size and loading quantity in tote are confirm to Master Process Specification.
2) Confirm to Product package
3) Confirm to Absorbed dose.
4) Chemical indicator attach to product final package(Yellow).
5) Measure the Weight of stocked product and write to Master record for gamma irradiation process.

11.3.2. Facility check and start a facility

1) Activate Air compressor
2) Use a key and start a facility

11.3.3. Loading product and irradiation preparation

11.3.3.1. Product load to lift at load area.

11.3.3.2. Products are loaded to lift loads safely in a tote.

1) Load to Product package won't be damaged or modify
2) Load to tote not swollen.
3) Do not expose the product outside the Tote.
4) Confirm to product density(product weight(kg) / Tote volume(630 ℓ))

11.3.3.3. Dosimeter attach to expected location(center of Tote)

11.3.3.4. Write to master record after load to product

11.3.3.5. "maintenance auto mode" use to Tote(loaded product) in position.

11.3.4. Timer setting, source activate and sterilization process

11.3.4.1. Timer is set make use of table 1(offer Mds-Nordion)

11.3.4.2. Source intensity change is calculate which make use of table 2(offer Mds-Nordion).

11.3.4.3. Source rack up and carry sterilization process out

1) Use the master key and eliminate Fault

2) Confirm to all indicator.

3) Confirm to Timer setting.

4) Depending on the access procedure go into irradiate room

5) Confirm to Facility normality.

6) Use the master key and operate start-up key

7) 90 sec delay Timer, the alarm that the listening and go out irradiation room

8) Safety chain of Source valve hang up the control room door

9) Close the control room door.

10) Use the master key, and source rack up.

11.3.4.4. Confirm to source pass of tote, put the tote into the irradiation room.

11.3.5. Dose evaluation and finish the sterilization process

11.3.5.1. Confirm to chemical indicator and dosimeter is evaluated when the Tote(sterilized) come out to unload area.

1) Warming up the spectrophotometer minimum 30 minute ago.

2) Set the wavelength.(Red: 640nm, Amber: 651 nm)

3) Set the zero(zero is blank value)

4) Evaluated Absorbed dose

5) Use to digital caliper and Evaluated Dosimeter thickness

6) Calibrated Table use to absorbed dose evaluation

7) Confirm to absorbed dose and write to master record for gamma irradiation process

11.3.5.2. When measured appropriate absorbed dose, unload to product. And product is stored “irradiated area”.

11.3.5.3. If dose caught short, carry out additional irradiation. And sterilization process finished.

11.3.5.4. When process finished, write to Master record for gamma irradiation process and notify to Quality control team.

11.4. Sterilization acceptance

After Evaluate dosimeter and write Master record for Gamma irradiation process, approved sterilization process suitability. After confirm Product effectivity, ‘certificate of irradiation’ will be issued, provide to customer.

Attachment 15 : Certificate of gamma sterilization

11.5. Release and storage

11.5.1. Operator is storage and control irradiated product not mixed other product. When long-term storage handling, storage and delivery in accordance with administrative regulations.

11.5.2. Operator is irradiation, according to the time of use not release to FIFO(first-in, first-out) principle and the quantity not release product management in the intestine, the customer pays record.

11.6. Occurrence notification of inconsistence product

11.6.1. When In irradiation the discovery of nonconforming product or problem occurs, finder immediately operator shall notify its contents to a suitable product is handled in accordance with administrative regulations.

11.6.2. Operator is to identification control and storage which unsuitable product, record to customer provide management register and notified immediately to sales manager

11.6.3. Sales manager is notified and discuss what customer unsuitable product

11.6.4. Miss, damage and loss in respect of customer product consultation with the customer in accordance with are decide

11.7. Control of non-irradiated product, irradiating product

Do not mix with other products, only products of customer load. The beginning and middle of the Tote, continuous, routine monitoring for the last three locations where the Tote should be attached to the Dosimeter. Chemical indicator attach to Product before product loading.

11.6.1. Non-irradiated and irradiated product shall be segregated.

Product load area of irradiated product and non-irradiated product is strictly segregated and moving of product impossible. After irradiate product move to irradiated area.

11.8. Absorbed dose of KM CORPORATION product evaluation and product release

Customer ask for dose is 25 ~ 40 kGy. When Minimum dose(sterilization dose) value is greater than 25 kGy and Maximum dose value is lower than 40 kGy, process is successful.

11.9. Irradiated product suitable evaluation.

If the value exceeds the maximum dose 40 kGy, products and processes to handle failure. If you do not exceed the minimum dose value 25 kGy, products and processes to handle failure and carry out additional irradiation. Additional irradiation is demand dose of the product is in excess of 25 kGy, Additional processing to adjust the Process Parameter does not exceed the maximum dose in the range. As this time, for additional irradiation information, record and preserve. Product demand dose is wide range(25 ~ 40 kGy), does not exceed the maximum dose is enough to Additional irradiation the extent. Additional irradiation is immediately decide and carry out after dose evaluation(3 ~ 5 minute), not evaluated segregated irradiation for microbiological effects or deterioration of the product.

“Process(to incoming from outgoing) is record and control by Master Record for Gamma irradiation Process.”

12. Maintenance of validation

12.1. General

The continued effectiveness of the established sterilization dose shall be demonstrated through the conduct of determinations of bioburden to monitor the number of microorganisms present on product in relation to a defined bioburden specification, and sterilization dose audits to monitor the radiation resistance of the bioburden on product.

12.2. Frequency of sterilization dose audits

12.2.1. For product of average bioburden greater than or equal to 1.5, the maximum interval of time between determinations of bioburden shall be three months.

12.2.2. For product of average bioburden less than 1.5 and for which a sterilization dose of 15 kGy has been selected, the maximum interval of time between determinations of bioburden shall be three months.

12.2.3. If the interval of time between the manufacture of batches of product is more than either one month or three months, as applicable, determinations of bioburden shall be performed on each production batch.

12.2.4. If the outcome of determinations of bioburden exceeds the specified limit, an investigation in accordance with ISO 11737-1 shall be performed. If a sterilization dose of 25 kGy has been selected and substantiated using Method VD_{max}^{25} and the average bioburden is less than 1,000, the sterilization dose audit frequency currently used shall be continued.

12.3. Sterilization dose audits

12.3.1. Dose audit period

* The first every three months → suitable case every six months → suitable case every twelve months

The maximum interval of time between performance of sterilization dose audits shall be twelve months.

* Sterilization dose auditing guidelines (SYS-SQ-105)

12.3.2. Obtain samples of product

Select at least 20 product items from a single batch of product

12.3.3. Determination average bioburden

*Products 10 ea test

12.3.4. Perform verification dose experiment

* 7.1 kGy

12.3.5. Sterility test

*1 positive or 0 positive : Accept the sterilization dose audit

*2 positive : Perform a confirmatory sterilization dose audit

*3 ~ 6 positive : Augmented Sterilization dose (25 kGy + Augmented value)

*More then 7 positive : Reestablishment of using another method

13. Recalibration

Table A.1 — Guidance on qualification of changes to a gamma irradiator

Irradiator change	Installation qualification	Operational qualification			
	Installation testing and equipment documentation	Equipment testing	Equipment calibration	Irradiator dose mapping	Type of dose mapping
Addition, removal or reconfiguration of/to radionuclide	○			○	Homogeneous material to design limits
Carrier/irradiation container redesign	○	○		○	Homogeneous material to design limits
Removal or relocation of overhead conveyor inside irradiation cell	○	○		○	Homogeneous material to design limits
Removal or relocation of stop units in the critical product path	○	○		○	Homogeneous material to design limits
Removal or relocation of stop units outside of the critical product path	○	○			
Replacement of source cables	○	○			
Redesign of the source drive system	○			○	Transit dose
Redesign that affects the source to product distance	○	○		○	Homogeneous material to design limits Transit dose
Redesign of the source rack system	○	○		○	Homogeneous material to design limits Transit dose
Changes to type of irradiator cycle timer	○	○	○		
Changes to type of irradiator radiation safety monitoring devices	○	○	○		
Changes to type of irradiator pool water monitoring devices	○	○	○ (if applicable)		
NOTE 1. Addition of radionuclide without reconfiguration of the source geometry might only require that part of the homogeneous dose mapping study be performed to confirm the results of mathematical modelling or modification objectives. Whereas addition of radionuclide with change of source geometry might require that all homogeneous dose maps be repeated in addition to some of the ancillary studies such as centre loading or partial load. NOTE 2. Pending results of operational testing (e.g. verification of source position), irradiator dose mapping may be required after source cable replacement. NOTE 3. OQ dose mapping results may lead to a repeat of PQ.					

*ISO 11137-1 : 2006 - Sterilization of health care products Radiation

Part 1: Requirements for development, validation and routine control of a sterilization process for medical devices

13.1. calibration

13.2. Maintenance of equipment

During the review of the maintenance records, the maintenance schedule and procedures should be revised as necessary to address information learned about the equipment.

13.3. Requalification of equipment

The intervals for requalification of the irradiator should be chosen to provide assurance that the irradiator is consistently operating within specifications. For gamma irradiators, the requalification is typically carried out in connection with replenishment of sources. For electron beam and X-ray irradiators, requalification is typically carried out on an annual cycle, with specific parts of requalification at shorter time intervals within this cycle. If requalification measurements show that the IQ and/or OQ status of the irradiator has changed, then PQ might have to be repeated.

13.4. Assessment of change

For gamma irradiators, examples of when OQ should be performed after a change include:
replenishment of the source;
changes in source geometry and position;
changes to the conveyor;
a change in product path;
a change in irradiation container.

The extent of the OQ will depend on the type and degree of the change (see Table A.1).

Determination of Sterilization Dose
[VD_{max}^{25} substantiation (SIP=1.0) VD_{max}^{25}]

Term	Value	Comment
Stage 1		
SAL	10^{-6}	This method substantiates only a 10^{-6} SAL at 25 kGy
SIP	1	The entire product unit was used for resistance group verification
Stage 2		
SIP bioburden estimate	6.0	SIP bioburden estimate results of 5.7, 4.9 and 7.4 were observed from the Three batches tested, for an average SIP bioburden estimate of 6.0.
Average bioburden estimate	9.72	The bioburden for the estimate product unit was calculated as follows. 9.23/1 = 9.23 7.94/1 = 7.94 11.99/1 = 11.99 The overall average bioburden is 9.72. None of the individual batch average bioburden was twice the overall average bioburden of 9.72, therefore the overall average bioburden is used to calculate the verification dose.
Stage 3		
Verification dose	7.1 kGy	Use ISO 11137-2:2006 table 9 to obtain the verification dose. A bioburden of 9.72 is not listed in the table 9, so the next higher biburden of 10.0 is used. The $VDmax^{25}$ dose for and SIP of 1 is calculated using the following equation. SIP verification dose = 7.1 kGy + (3.57 × log1) = 7.1 kGy
Stage 4		
Sterility results	0 positive	The verification dose was within the specified dose range. (±10%) At 6.39 ~ 7.81 kGy / (7.20 ~ 7.29 kGy)
Stage 5		
Sterilization Dose for 10^{-6} SAL	25 kGy	The sterility test results were acceptable(0≤ 1 positives). There fore, 25 kGy has been substantiated to achieve at least a 10^{-6} SAL.

Product information

Purely Advanced

2015 Edition

Know-how Makes KM **Technical Data Sheet**

KM Sterilized Nonwoven Wiper

Sterilized Nonwoven Sheet Wiper
for Clean Environment

Description

KM-6509는 Polyester와 Cellulose 수압직조법으로 생산하여 친수성이 뛰어나 습식 Cleaning시 액체를 잘 흡수하며, 거친면 Cleaning에도 표면의 보푸라기가 일어나지 않아 오염제어에 탁월함. 감마선(Gamma Ray)으로 멸균처리하여 박테리아 및 세균으로부터 안전한 멸균 Wiper임.

Feature

- 감마선(Gamma Ray) 멸균으로 장기간 보관 용이
- 저 중량, 얇은 두께 대비 고흡수성
- 높은 흡수율, 빠른 흡수속도
- 환경친화적 제품으로 사용 후 소각시 유독가스 발생 억제
- Polyester & Microdenier 원단 대비 고흡수력
- 뛰어난 조직결합을 통한 견고한 구조로 내마모성 및 물리적 충격과 마찰에 강함

Product

Name	Description	Packaging
KM-6509	9″ x 9″	100sh/bag, 8bag/box

Application

- Cleanroom, Assembly Line의 부품, 장비 및 바닥 Cleaning용
- 공정 장비 및 설비용 부품류의 전세정(Pre-cleaning)
- 각종 장비 및 설비의 외면, 프레임 청소
- Cleanroom내 Access Floor 청소 및 부품, 장비, 표면 Cleaning

Product Environment

- Cleanroom 환경에서 생산한 Clean Wiper
- 지속적인 Cleanroom 관리를 통한 고객 품질 만족
- ISO 9001:2008 품질규격에 입각한 엄격한 품질 검사
- 감마(cobalt-60)멸균 처리하여 세균 및 미생물 박멸
- Dosimetry Range를 20~40kGy로 관리 적용

Table 3—General guide to radiation stability of materials

MATERIALS	RADIATION STABILITY	COMMENTS
Thermoplastics		
ABS	Good	High impact grades are not as radiation resistant as standard impact grades.
Acrylics (PMMA)	Fair–Good	
Cellulosics		Esters degrade less than does cellulose.
Esters	Fair	
Cellulose acetate propionate	Fair	
Cellulose acetate butyrate	Good–Fair	
Cellulose, paper, cardboard	Fair–Good	
Fluoropolymers		When irradiated, PTFE and PFA are significantly damaged. The others show better stability. Some are excellent.
Polytetrafluoroethylene (PTFE)	Poor	
Perfluoro Alkoxy (PFA)	Poor	
Polychlorotrifluoroethylene (PCTFE)	Good–Excellent	
Polyinyl fluoride (PVF)	Good–Excellent	
Polyvinylidene fluoride (PVDF)	Good–Excellent	
Ethylene-Tetrafluoroethylene (ETFE)	Good	
Fluorinated ethylene propylene (FEP)	Fair	
Liquid Crystal Polymer (LCP)	Excellent	Commercial LCPs; Natural LCPs not stable.
Polyacetals	Poor	Irradiation causes embrittlement. Color changes have been noted (yellow to green).
Polyamides (Nylon)	Good	Nylon 10,11,12,6-6, more stable than 6. Nylon film and fiber are less resistant.
Polycarbonate	Good–Excellent	Yellows—mechanical properties not greatly affected; color-corrected radiation formulations are available.
Polyesters	Good–Excellent	PBT not as radiation stable as PET resins.
Polyethylene, various density	Good–Excellent	HD not as stable as MD and LD.
Polyimides	Excellent	
Polyphenylene sulfide	Excellent	
Polypropylene, natural Polypropylene, stabilized	Poor–Fair	Physical properties greatly reduced when irradiated. Radiation stabilized grades, utilizing high Mw and co-polymerized and alloyed with polyethylene, should be used in most radiation applications; High dose rate electron beam may reduce oxidative degradation.
Polystyrene	Excellent	
Polysulfone	Excellent	Natural material is yellow.
Polyurethane	Excellent–Good	Aromatic discolors; polyesters more stable than esters. Retains physical properties.
Polyvinylchloride (PVC)	Good	Yellows—antioxidants and stabilizers prevent yellowing. High molecular weight organotin stabilizers improve radiation stability: color-corrected radiation formulations available.
Polyvinylchloride-Polyvinylacetate	Good	Less resistant than PVC.
Polyvinylidene dichloride (Saran)	Good	Less resistant than PVC.
Styrene/Acrylonitrile (SAN)	Good–Excellent	

Table 3—General guide to radiation stability of materials (continued)

MATERIALS	RADIATION STABILITY	COMMENTS
Elastomers		
Butyl	Poor	Friable, sheds particulate.
Chlorosulfonated polyethylene	Poor	
EPDM	Excellent	
Natural rubber	Good–Excellent	
Nitrile	Good–Excellent	Discolors.
Polyacrylic	Poor	
Polychloroprene (neoprene)	Good	Discolors; the addition of aromatic plasticizers renders the material more stable to irradiation.
Silicone	Good	Phenyl-methyl silicones are more stable than are methyl silicones. Platinum cured silicones are superior to peroxide cured silicones. Full cure during manufacture can eliminate most post-irradiation effects.
Styrene-butadiene	Good	
Urethane	Excellent	
Thermosets		
Allyl diglycol carbonate (Polyester)	Excellent	Maintains its excellent optical properties after irradiation.
Epoxies	Excellent	All curing systems.
Phenolics	Excellent	Includes the addition of mineral fillers.
Polyesters	Excellent	Includes the addition of mineral or glass fibers.
Polyurethanes Aliphatic Aromatic	 Excellent Good–Excellent	 Darkening can occur. Possible breakdown products could be derived.

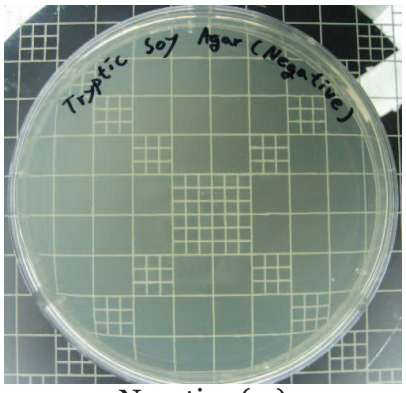
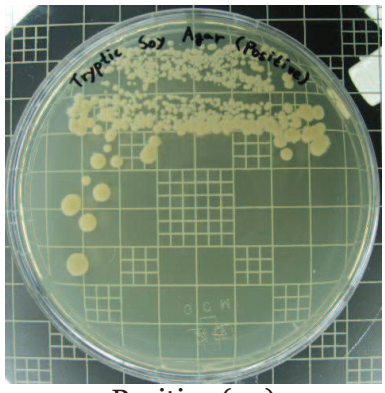
Test Report for Sterility & Growth Promotion of Culture Media

배 지 명 (Media)	: Tryptic Soy Agar
제 조 사 (Manufacturer)	: BD
제조번호 (Batch No)	: 1227460
시험방법 (Test method)	: ISO 11737-1:2006 / Direct
실험환경 (Laboratory condition)	: temperature 20.4 ℃, humidity 32.7 %
배양조건 (Incubation condition)	: 32.5 ℃, 5 days(120 hour)
배양시간 (Incubation time)	: 2012. 10. 05. ~ 2012. 10. 10.



Negative (-)



Positive (+)

*Test Method

(A) Sterility Test of Media	사용한 배지가 오염되었는지 확인한다. Ensure that contaminated a sterile medium(Negative medium)
(B) Growth Promotion Test of Media	배지에 균주*(Candida albicans)*를 접종한다. Inoculate with colony*(Candida albicans)* in the medium.

*Result

(A) Sterility Test of Media	Negative (음성-)
(B) Growth Promotion Test of Media	Positive (양성+)
→ Tryptic Soy Agar는 미생물이 생장 할 수 있는 배지이며, 고압증기멸균(121℃, 15분)도 성공적으로 수행되었다. Tryptic Soy Agar is the microorganisms can grow and it has been sterilized(121℃, 15 Minute) very well.	

Oct. 10. 2012.

Certificate of Analysis

Product Name : BOTTLE TRYPTIC SOY AGAR 500G
Catalog Number : 236950 **Manufacture Date :** 2011/07/21
Batch Number : 1227460
Expiration Date : 2016/04/30

01. Dehydrated Medium Appearance: Light beige, free-flowing, homogeneous
02. Solubility: 4.0% solution, soluble in distilled or deionized water on boiling
03. Solution Appearance: Light amber, slightly to moderately opalescent
04. Plate Appearance: Clear to slightly opalescent, without precipitate
05. CAMP Test: Streptococcus agalactiae ATCC® 12386 gave a + reaction and Streptococcus pyogenes ATCC® 19615 gave a - reaction when tested with Staphylococcus aureus ATCC® 33862.
06. USP/EP/JP Growth Promotion test performance specification where applicable.

TEST ORGANISMS	ATCC®	INOC	RECOVERY	TEMP	INCUBATION
Aspergillus niger	16404	<100 CFUs	growth	30-35˚C	Up to 5 days
Bacillus subtilis	6633	<100 CFUs	growth	30-35˚C	Up to 3 days
Candida albicans	10231	<100 CFUs	growth	30-35˚C	Up to 5 days
Escherichia coli	8739	<100 CFUs	growth	30-35˚C	Up to 3 days
Pseudomonas aeruginosa	9027	<100 CFUs	growth	30-35˚C	Up to 3 days
Salmonella typhimurium	14028	<100 CFUs	growth	30-35˚C	Up to 3 days
Staphylococcus aureus	6538	<100 CFUs	growth	30-35˚C	Up to 3 days

07. Cultural Response: Medium was prepared per label instructions. Plates with and without 5% sheep blood (SB) were inoculated with the test organisms and incubated under 5-10% CO2 at 35 ± 2˚C for 18-48 hours.

TEST ORGANISMS	ATCC®	RECOVERY		HEMOLYSIS
		PLAIN	w/SB	
Escherichia coli	25922	good	good	beta
Neisseria meningitidis	13090	good	good	none
Staphylococcus aureus	25923	good	good	beta
Streptococcus pneumoniae	6305	good	good	alpha
Streptococcus pyogenes	19615	good	good	beta

08. Residual Solvents (CPMP/ICH/283/95): Typical Analysis for Tryptic Soy Agar indicates that there is less than 5000 ppm of Acetone. No other solvents were detected during analysis.

Characteristic	Unit	Value	LowLimit	HighLimit
pH at 25˚C :		7.3	7.1	7.5

Gamma Irradiation for verification experiment

(Gamma Irradiation for Verification Experiment)

Validation report for application of verification doses during microbiological dose setting exercises

▷ Summary

SO 11137-2 is described in the Method VDmax^{25} test dose of the product in a very low dose is required to investigate the correct dose. The sample survey of the additional equipment attached to the Research Loop (test container) using a low area to investigate the dose accurately.

Research Loop, and the product of the research path has a separate Timer and a small amount of product for the correct dose can be investigated.

▷ Procedures and methods

Research Loop container products in 10(ea) in the form of a fixed loading dose of maximum and minimum load and are expected to absorb part of the designated locations, including products that are irradiated by attaching Dosimeter.

After a certain time has elapsed spin product Dose uniformity of the product will improve. 1 hour intervals by the crew of the incident direction and then rotated 90 ° each product will rotate every 30 minutes.

After investigating a number of products that are attached to the Dosimeter will assess and record dose.

▷ Verification dose acceptance criteria

The highest dose to the measured dose may not exceed VDmax^{25} by more than 10%. If the arithmetic mean of the highest and lowest doses of measured doses is < 90% of VDmax^{25}, the verification dose experiment may be repeated. If this mean dose is < 90% of VDmax^{25} and, on performance of the test of sterility, acceptable results are observed, the verification experiment need not be repeated.

Research Loading Pattern & Dosimeter Readings

Customer	: KM CORPORATION
Device Name	: KM-6612L
Batch No.	: HH-04
Quantity	: Total 10 unit
Total Weight	: 1,752 g
Density	: 0.024 g/cm^3
Verification dose	: 7.1 kGy
Dose Range Specification	: 6.39 kGy ~ 7.81 kGy
Dosimeter	: Amber 3042 R
Exposure Time	: 08 hour 10 min
Exposure Date	: Nov. 26. 2012. ~ Nov. 27. 2012.

Agreement for contract sterilization

Contract Protocol for Gamma Irradiation

This agreement between **KM CORPORATION**(hereinafter called "A")and **SOYAGREENTEC Co., Ltd.**(hereinafter called "B") on the gamma sterilization commissioned to an agreement about the following:

Article 1. General

"A" shall consign the Gamma Irradiation process for **Sterilized Non-Woven Wiper** of "A" to "B", and "B" shall deliver the irradiated product to "A" after the Gamma irradiation process.

Article 2. Package and Quality of Material

The package of product shall be packed suitable for the Gamma irradiation process, and the quality of the packaging material shall be radiation-resistant. "B" is not responsible for the related change(chemical and physical) of property of matter of the product.

Article 3. Method of Gamma Irradiation Process

Decision for the method of Gamma irradiation process shall follow the below :

1> Gamma irradiation conditions are as follows, "B" is responsibility for next condition.

a> Use to Irradiation source of Co^{-60}.

b> "A" is SAL should be 10^{-6}, "B"' is the correct action should proceed accordingly.

c> "A" always give Request for Gamma Irradiation to "B".

d> Specified Dose use to document(that required dose is written by "A").

2> "A" is responsibility for Product shelf life and product safety test

3> "A" and "B" shall label the mark for Gamma irradiated product on the outer carton by mutual agreement.

4> "A" takes charge of sterilization test to verify the quality of sterilization.

5> "B" may claim the damages to "A" in case that "A" distributes the product that is not processed by Gamma irradiation in the state of putting the mark or words for Gamma irradiation process on.

Article 4. Payment condition

Fee for irradiation service and payment terms follows separate price agreement.

Article 5. Warehousing and Deliver

"A" shall notice "B" of warehousing of goods at least 2 days prior to warehousing. Unless it is inevitable, "B" shall meet the requested deliver of "A", "A" takes charge of all

the transport charges.

Article 6. Force Majeure

Neither party shall hold the other responsible for any delay or failure of performance occasioned or caused by strikes, riots, fire, insurrection, the elements, embargoes, failure of carriers, inability to obtain materials or transportation facilities, act of God or of the public enemy, governmental tariffs or quotas, compliance with any law, regulation or other governmental or court order whether or not valid, or other causes beyond the reasonable control of the parties.

Article 7. Duration of agreement

This agreement shall be in full force and effect on the day of last signing of both parties, and remain to be valid for 12 months. If one of the parties wish to terminate or revise this agreement, give notice to the other party in writing 30 days before the expiry of this agreement. If not, this agreement automatically a continues to be valid another one(1) year.

Article 8. Cancellation of agreement and Claim damages

"A" and "B" may cancel the agreement by written notice if any one condition conforms to the following cases :

1> If the production of goods of "A" stopped for a certain long term of period so that it is judged to be impossible for "A" to resume working.

2> If "A" does not start doing the business or does not continue the business with "B" within 6months without any reasonable cause.

3> If "A" does the business with only a part of quantity of the products mentioned in the contract.

4> If "B" does not irradiate and deliver the products without meeting the request of "A"

5> If the other reasonable cause unable to fulfill the contract occurs.

6> "A" shall compensate "B" for the damage from the cancellation of contract caused by "A" within the term of the contract.

7> "B" shall compensate "A" for the damage for the clause 4.

Article 9. Arbitration

All disputes, controversies, or differences that may arise among the parties, out of or

in relation to this agreement, or for the breach thereof, shall be settled by the competent court for "A" and the arbitration shall be held in the competent court for "A".

Article 10. Miscellaneous

The other particulars which are not mentioned in this contract shall be decided by mutual agreement according to general practice.

In witness whereof, "A" and "B" have caused this Agreement to be signed by their duly authorized.

*Fig. 6. Source and Source rack

The JS-10000 Hanging Tote Irradiator is the ultimate in flexibility and performance, providing an ideal solution in high-mix, high-volume environments where the focus is on getting the highest value of product out the door at the lowest cost.

JS-10000

Hanging Tote Irradiator

Superior Performance on a Large Scale

MDS Nordion

JS-10000

Hanging Tote Irradiator

Gamma Processing Solutions from the Leader

MDS Nordion combines world-class capabilities in electro-mechanical design, controls, radiation physics, dosimetry and regulatory affairs with a global reach in sales, installation and service to lead the industry in delivering end-to-end solutions for our customers. The ultimate measure of our success is your success, which begins with an intimate understanding of your business, and ends in total customer satisfaction.

Superior Performance on a Large Scale

Using state-of-the-art controls technology, precision electric drives and a tote designed for maximum durability and minimum absorption, the **JS-10000** is the workhorse of industrial irradiators. Unsurpassed reliability and uptime mean more operating hours and better utilization of capital, a key performance measure whether you are a medical device manufacturer or contract service provider.

For the Way You Do Business

The Multi-Mode Operation (MMO) feature available on the **JS-10000** provides a selection of source pass product flows, allowing the operator to optimize production for different business environments, from high-volume where efficiency is paramount, to high-mix with frequent product changeovers and widely varying dose requirements, including difficult-to-process products with demanding dose uniformity specifications.

Information at Your Fingertips

The **JS-10000** employs Programmable Logic Control (PLC) and Supervisory Control And Data Acquisition (SCADA) technology for reliable and intuitive operation. The user interface provides real-time status of all irradiator components, including the integrated safety systems. Data logging and reporting is accomplished with a robust database, and network connectivity provides the option for remote diagnostics and troubleshooting.

A Passion for Safety

All of MDS Nordion's irradiators meet internationally recognized safety and security standards, such as 10 CFR Part 36, IAEA Safety Series 107 and ANSI 43.10. MDS Nordion's industry involvement and years of experience in regulatory affairs means you can be assured that our products incorporate the latest advancements in safety and security.

The Gamma Advantage

- High penetration for treatment of products with mated surfaces, thin lumens and higher densities, all in final packaging
- Scalable so that your throughput can grow when your business does
- Immediate product release through dosimetry gets product to your customer faster
- Robust and reliable technology that is easy to operate and maintain
- Safety and efficacy track record, sterilizing more than 40% of the world's single-use medical devices

Specifications	
Source Rack Capacity	5 MCi
Maximum Product Stack (L x W x H)	24 in. x 41 in. x 72 in. (610 mm x 1041 mm x 1829 mm)
Maximum Product Weight	1022 lbs. (465 kg)
Maximum Product Density	0.4 g/cc
Floor Area Required (with standard storage)	119 ft. x 46 ft. (36 m x 14 m)
Modes of Operation	Standard: 4 pass automatic continuous
	Optional: 2 pass automatic continuous, 2 pass automatic batch, 2 pass incremental dose

So, one day(86 400 s) error is 0.23 s and uncertainty is 0.011 s.

The End.

Harwell Dosimeters

Dosimeter systems for radiation processing

Supporting radiation processing – worldwide

Harwell: rooted in history...
but with a vision for the future

Harwell Dosimeters are located in a region which has at least 5000 years of human endeavour behind it! Our Science and Innovation Campus is situated on the most ancient road in England, hard by a burial place of Saxon royalty, a Bronze Age monument, an Iron Age settlement, and a Neolithic burial chamber!

We share this campus with the first nuclear reactor to be built in Europe, and with the newest, most powerful synchrotron in the world, opened by Her Majesty the Queen last year.

Even the names of the roads around us evoke some of the greatest contributors to the development of the nuclear industry, ranging from Rutherford and the Curies, to Maxwell and Thomson, not forgetting Röntgen and Fermi. Our address is Becquerel Avenue, after the Frenchman Henri Becquerel, whose fogged photographic film revealed radioactivity and launched the industry.

Our own development is continuous from the earliest days of radiation processing, to the present day.

We continue to advance in technology, and invest in our processes.

To our long established range of optical dosimeters, in 2002 we added the new technology of Alanine/esr dosimetry. We now supply increasing quantities to advanced international companies, as well as to standards laboratories.

The optical dosimeters have not stood still. Following recent investment, Perspex produced to our specification is now processed from raw material to finished dosimeters, all within our own facility.

We have grown with the industry we serve, supply customers on every continent except Antarctica, and look to the future with enthusiasm.

The quality assured manufacturer

Harwell Dosimeter systems for radiation processing

A proven global track record in dosimeters

In the earliest days of radiation processing, Harwell Dosimeters devised disposable, passive dosimeters for validation and control, and has continued to develop with the industry to ensure that its evolving requirements are met.

The dosimeters are foil-packed for reliability in any processing environment. They are:

- ***Rugged***
- ***Reliable***
- ***Precise***
- ***Quality assured***

Dependable dosimeter systems for radiation processing

For precise, accurate dose measurements, Harwell Dosimeters offer:

Optical dosimeters – uniquely labelled and bar-coded aluminium foil laminate sachets containing dyed Perspex,™ which darkens quantitatively when irradiated, and when measured by spectrophotometry yields a precise, accurate, measure of dose;

or **RadSpin™ dosimeters** – uniquely labelled are bar-coded blister-packed pellet which exploit the dose-dependence of the paramagnetic resonance of alanine over a wide dose range.

Your choice

Whether you want the simplicity and confidence inspired by the long-established, worldwide use of our dyed pmma optical systems, or wish to exploit the potential of alanine/esr technology, Harwell Dosimeters aim to meet your dosimeter needs.

Harwell®, RadSpin™, and Gammachrome YR® are registered trade names of Harwell Dosimeters Ltd.

Perspex™ is a registered trade name of Lucite Ltd.

Choosing a purchase plan

Traditional

Plant by plant, as required. Minimum order 1000 dosimeters.

Large requirements

Buy whole batches – customers distribute to their sites.

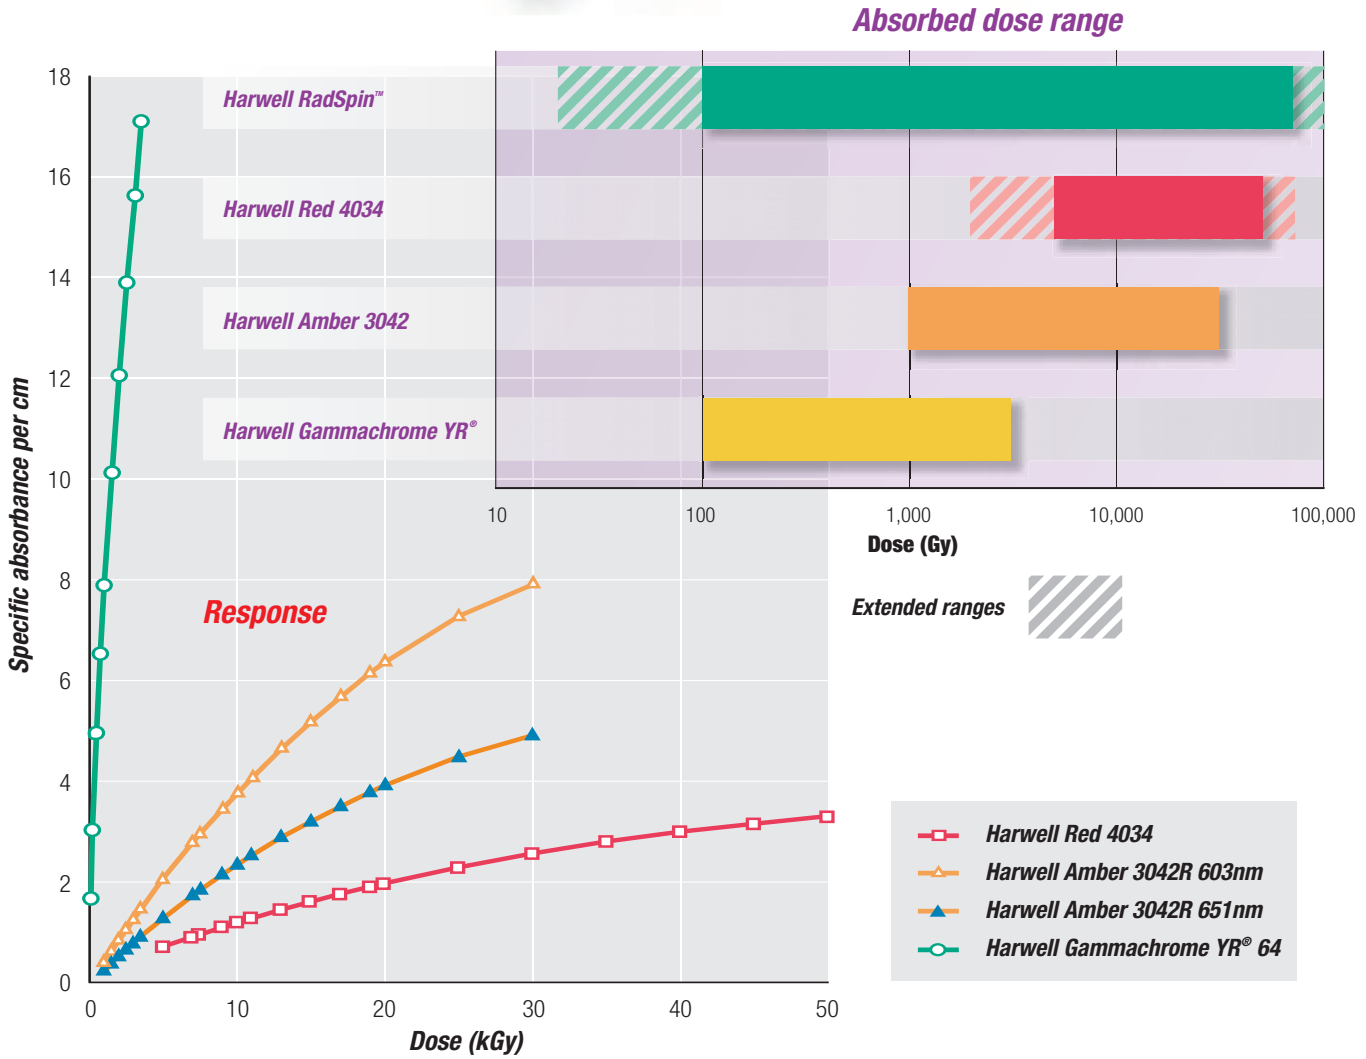
Phased delivery

- customer estimates requirement for a year
- minimum order 50k dosimeters
- price ruling on day of first despatch
- we allocate and store a batch from which to supply
- we despatch to a timetable, or on demand
- invoice on despatch.

or

- customer estimates requirements for two years
- minimum order 50k dosimeters
- we allocate and store a batch from which to supply
- we supply to demand, minimum 10k
- price ruling on day of call-off
- invoice on despatch.

Radiation dose ranges



Harwell Dosimeter systems for radiation processing

Specifications, responses and sensitivities

Harwell RadSpin™

Harwell RadSpin™ Dosimeters for the measurement of radiation dose

When pellets containing the amino acid alanine are irradiated, stable free radicals are produced in a concentration which depends on the exposure. The measured response to microwaves of the pellet placed in the magnetic field of a paramagnetic resonance spectrometer, is quantitatively related to the radiation dose which the pellet absorbed.

Form

White cylindrical pellets of alanine in a wax binder.

Material

Active	amino acid L-alpha alanine	90.9%
	Binderparaffin wax	9.1%

Dimensions

Diameter	4.825mm ± 0.01mm (5mm to special order).
Height	2.8mm ± 0.1mm.
Mass	overall 60mg ± 2mg within a lot ± 0.6mg standard deviation 0.3mg.

Measurement reproducibility

mass	CV 0.5%
response	CV 0.5% NPL irradiated, not packed.

Dose range

Standard range 100 Gy to 70 kGy
10 Gy to 100 kGy may be achieved.

Performance

Each batch is verified by NPL comparison.

Packaging

Two formats
- plain pellets, bulk packed
- RadSpin™ Dosimeters consisting of pellets sealed in labelled aluminium foil blisters, packed 1,000 per carton.

Labelling

Each dosimeter is uniquely labelled and barcoded.

Harwell Red 4034 Dosimeters

Harwell Red 4034 Dosimeters for the measurement of radiation dose

Material

A single batch of Red 4034 Perspex cast polymethylmethacrylate sheets.

Dimensions

30mm x 11mm. Thickness 3 ± 0.55mm.

Measurement reproducibility

Coefficient of variation of specific absorbance measurements on sets of dosimeters from the batch, simultaneously irradiated together, in a gamma radiation field uniform within ±1%, is 2% over the entire calibrated range, 5 to 50 kGy.

Calibration quality

Over the calibrated range, all mean specific absorbance data points thus obtained are within 2% of a fourth-order polynomial least-squares fit to the data.

Traceability

Harwell calibration is traceable to the UK standard of absorbed dose at the National Physical Laboratory (NPL).

Shelf-life

Ten years from date of release.

Packaging

Sealed in labelled sachets made of polyester/aluminium foil/polyester/polyethylene laminate, packed 1000 per carton.

Packing to defined AQL's checked to BS6001 (ISO 2859-1), single normal inspection, level II.

Labelling

Each dosimeter is uniquely labelled and barcoded.

Harwell Amber 3042 Dosimeters

Harwell Amber 3042 Dosimeters for the measurement of radiation dose

Material

A single batch of Amber 3042 Perspex cast polymethylmethacrylate sheets.

Dimensions

30mm x 11mm. Thickness 3 ± 0.55mm.

Measurement reproducibility

Coefficient of variation of specific absorbance measurements on sets of dosimeters from the batch, simultaneously irradiated together, in a radiation field uniform within ±1%, is ≤2.5% over the ranges 1 to 10 kGy at 603 nm wavelength and 10 to 30 kGy at 651 nm.

Calibration quality

Over the calibrated range, all mean specific absorbance data points thus obtained are within 3% of a fourth-order polynomial least-squares fit to the data.

Traceability

Harwell calibration is traceable to the UK standard of absorbed dose at the National Physical Laboratory (NPL).

Calibration performance of each batch is verified by NPL intercomparison.

Shelf-life

Ten years from date of release.

Packaging

Sealed in labelled sachets made of polyester/aluminium foil/polyester/polyethylene laminate, packed 1000 per carton.

Packing to defined AQL's checked to BS6001 (ISO 2859-1), single normal inspection, level II.

Labelling

Each dosimeter is uniquely labelled and barcoded.

Harwell Gammachrome YR® Dosimeters

Harwell Gammachrome YR® Dosimeters for the measurement of radiation dose

Material

A single batch of Gammachrome YR® Perspex cast polymethylmethacrylate sheets.

Dimensions

30mm x 11mm. Thickness 1.7mm nominal.

Measurement reproducibility

Coefficient of variation of specific absorbance measurements on sets of dosimeters from the batch, simultaneously irradiated together, in a radiation field uniform within ±1%, is ≤3% over the ranges 100 to 300 Gy at 530 nm wavelength.

Calibration quality

Over the calibrated range, all mean specific absorbance data points are within 3% of a polynomial least-squares fit to the data.

Traceability

Harwell calibration is traceable to the UK standard of absorbed dose at the National Physical Laboratory (NPL).

Calibration performance of each batch is verified by NPL intercomparison.

Shelf-life

Ten years from date of release.

Packaging

Sealed in labelled sachets made of polyester/aluminium foil/polyester/polyethylene laminate, packed 1000 per carton.

Packing to defined AQL's checked to BS6001 (ISO 2859-1), single normal inspection, level II.

Labelling

Each dosimeter is labelled with the batch code.

HARWELL
Dosimeters

Harwell Dosimeters Limited

HARWELL PERSPEX (PMMA) DOSIMETERS

The following dyed-polymethylmethacrylate **(PMMA)** dosimeters have been developed at Harwell for the measurement of high doses of gamma radiation in industrial radiation processing.

Type	Recommended Dose Range	Recommended Read-out Wavelength
Red 4034	5 to 50 Kilograys (kGy)	640 nanometers
Amber 3042	1 to 30 kGy	603 nm or 651 nm
GAMMACHROME YR®	100 Gy to 3 kGy	530 nm

The dosimeters are 30 x 11 mm optically clear rectangular pieces of material, conditioned and individually sealed in labelled polyester/aluminium foil/polyethylene laminate sachets. On irradiation the dosimeters visibly darken and the degree of darkening, accurately measurable by spectrophotometry, is related to absorbed (water-equivalent) dose.

The dosimeters are produced in batches. The batch reference numbers or letters are displayed on the dosimeter labels. (For example 4034 AX is Red 4034 batch AX). Each batch of dosimeters is subjected to rigorous quality-control, checked for conformance with specification, and finally calibrated using a standardised cobalt-60 irradiator and spectrophotometer before release for sale. The standardisation of the irradiator, and the final dosimeter calibrations, are directly traceable to UK National Standards.

INSTRUMENTATION REQUIRED

A good quality spectrophotometer, and a micrometer or dial gauge. It is recommended that these instruments are regularly tested for accuracy by means of standardised glass filters and hardened-steel gauge blocks.

METHOD

1. The dosimeters must remain sealed before, during and after irradiation, until the time of reading. (The packaging material is specially selected to protect the **PMMA** from the effects of extremes of atmospheric humidity).

2. Preferably, the dosimeters should be read within 2 days after irradiation.

3. In the case of **GAMMACHROME YR ®**, allow a minimum of two hours (normal temperature) for full colour development after irradiation.

4. Select the recommended readout wavelength. For Amber 3042 dosimeters, 603 nm provides higher sensitivity which can be useful up to a dose of 10 kGy.

5. After opening the pack it is recommended that the irradiated dosimeter is wiped with paper tissue moistened with a suitable solvent such as ethyl alcohol.

6. Using the spectrophotometer, measure the total optical absorbance (A) of the dosimeter. (Air as reference in the case of double-beam instruments).

(Note: tests have shown that corrections for pre-irradiation absorbance (Ao) are unnecessary, and can in fact result in reduced precision).

7. Measure the thickness (t) of the dosimeter.

8. Calculate the specific absorbance A/t. This is normally expressed in units of cm-1 or mm-1, depending on dosimeter type.

9. Using a specific absorbance versus dose calibration graph, table, or polynomial equation, convert each A/t value to derived dose.

ACCURACY OF INSTRUMENTATION

The following are useful (and achievable) goals.

Selection of readout wavelength	within +/- 1 nm
Measurement of A	within +/- 1%
Measurement of t	within +/- 1%

CALIBRATION

Harwell supplies calibration curves and tables with each batch of dosimeters which are meant to be used as a guide and to demonstrate that calibration can be satisfactorily achieved. Users are advised to calibrate their stocks of dosimeters, using their own instrumentation. For this purpose Harwell, and national laboratories such as NPL the National Physical Laboratory (UK), and NIST (USA), will irradiate sets of users dosimeters to accurately known doses.

If the conditions of use are unusual, for example there are exceptionally high or low irradiation temperatures or there are to be delays of several days before measurement, then equivalent calibration conditions should be used.

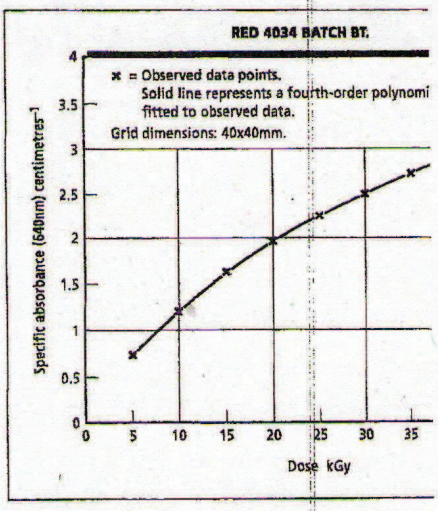
RECOMMENDED PRACTICE

A valuable guide to the use of pmma dosimeters is E1276, published by ASTM, the American Society for Testing and Materials.

CONTACTS

Orders and routine contact:	Mrs M E Plested	Tel: +44 (0) 1235 435704
General Manager:	Dr R Bett	Tel: +44 (0) 1235 435812
		Fax: +44 (0) 1235 436313

Although the wavelength of 640 nm gives the minimum post-irradiation changes in absorbance, the rate of change of absorbance with wavelength in this region is quite steep. For accurate measurements a spectrophotometer with a wavelength calibration accuracy of ±1 nm is required.



Effect of Dose Rate and Radiation Type

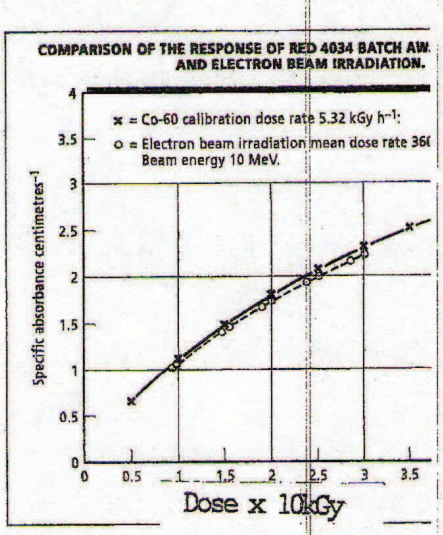
Figure 3 compares the responses of one batch of Red 4034 dosimeters to cobalt-60 and electron-beam (EB) radiation. The cobalt-60 irradiations were carried out in the Harwell calibration facility described above, at a dose rate of 5.33 kGy/h. The EB irradiations were carried out in the NPL electron accelerator at 10 MeV energy and a considerably higher dose rate of 360 kGy/h. Under these very different conditions the response at 25 kGy was only 3.8% lower than for the cobalt-60 irradiation.

Whittaker et al [3] observed that across a range of gamma dose rates from 5.58 kGy/h to 11.7 kGy/h the gamma dose-rate effect within the same batch of Red 4034 dosimeters was insignificant.

Measurement Uncertainty

The precision of the specific absorbance measurements on dosimeters irradiated to the same dose at the same temperature has a coefficient of variation of ±2%.

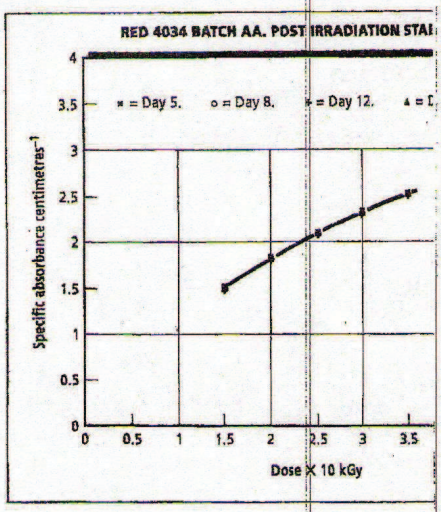
In an intercomparison exercise under controlled conditions, good agreement was obtained between the participating laboratories [4]. Measurement precision (defined as the uncertainty associated with an individual laboratory's measurements on sets of dosimeters irradiated to the same dose) in all cases lay within ±1.5% of the grand mean.



Temperature Effects

The temperature coefficient of Red 4034 dosimeters over the range –78°C to +100°C has been measured as –0.13% per °C, at a dose of 20kGy [5]. Barrett et al observed a 1% increase in radiation response over the temperature range 25-43°C [6]. More recently, Al- Sheikhly et al reported that the temperature dependence of the dose response in the range 20-40°C is small, at a cobalt-60 gamma dose-rate of 31 kGy/h and doses of 30 kGy or less [7]. This last set of experiments employed a post-irradiation storage temperature of 22°C.

The temperature coefficient becomes more significant at higher doses, higher irradiation temperatures and higher temperatures of post-irradiation storage. It is therefore important to establish a protocol for the routine in-plant measurement of absorbed dose.

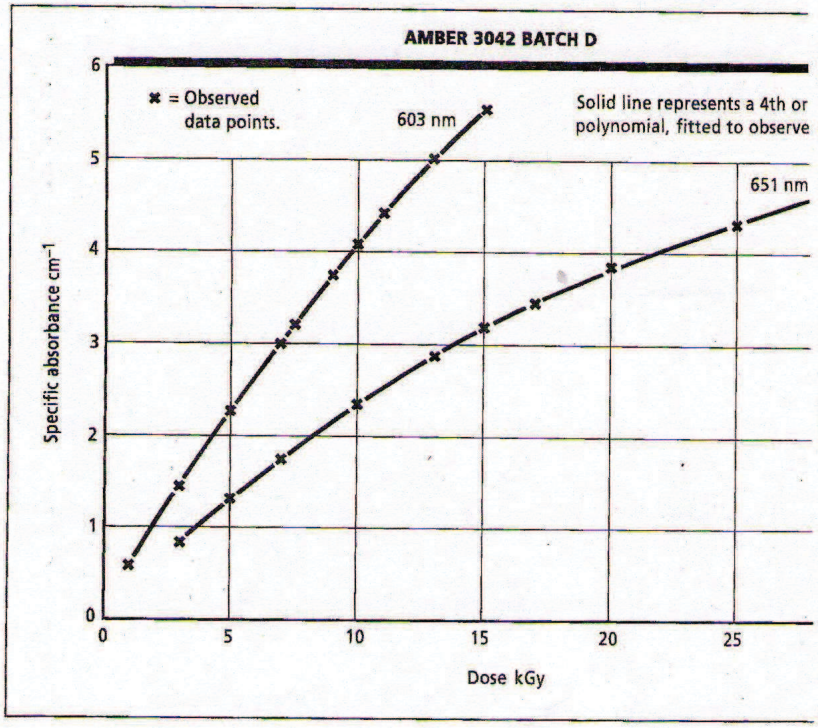


Post-Irradiation Stability

Post-irradiation storage temperature is important, and for the best accuracy exposed dosimeters should be stored - still sealed in their sachets - at 20±5°C.

For a set of dosimeters which were irradiated at 25°C to doses of 25, 30 and 35 kGy and then stored in their sachets at the same temperature, post-irradiation fading of the specific absorbance has been shown to be less than 2% over a 27-day period (Figure 4) [4].

Figure 2 shows typical cobalt-60 gamma irradiation response curves at 603 nm and at 651 nm. The data were obtained by irradiating sets of dosimeters to known doses in the Harwell cobalt-60 calibration facility, in which the dose rate is traceable to the UK National Standard of absorbed dose maintained by the National Physical Laboratory (NPL) [2]. Traceability is established through dichromate reference dosimeters supplied by NPL, irradiated at Harwell and measured by NPL. The accuracy of Harwell's spectrophotometer absorbance measurements is also traceable to NPL through the use of certified neutral density filters. The thickness gauge is checked using standard hardened steel gauge blocks.



Temperature Effects

The temperature coefficient of Amber 3042 dosimeters over the range -78°C to +100°C has been measured as +0.5% per °C, at a dose of 10kGy [3].

The temperature coefficient becomes more significant at higher doses, higher irradiation temperatures and higher temperatures of post-irradiation storage. It is therefore important to establish a protocol for the routine in-plant measurement of absorbed dose.

Measurement Uncertainty

The precision of specific absorbance measurements on dosimeters irradiated to the same dose at the same temperature has a coefficient of variation of ±2%.

Post-Irradiation Stability

After irradiation Amber 3042 continues to darken a little, leading to an initial increase in absorbance. Subsequently the colour intensity decreases, and after 10 days the absorbance is 2% less than the value measured immediately after irradiation. Time after irradiation is therefore an extremely important element of the protocol for dose measurement using Amber 3042 dosimeters.

Batch-to-Batch Variations

Amber 3042 dosimeters are manufactured in batches, and the batch number is printed on the label (eg 3042 B refers to batch B). As already noted, variations within the same batch are minimal. Each batch also undergoes a performance intercomparison which is traceable to NPL (see Manufacturing Quality Control below).

HARWELL
Dosimeters
Harwell Dosimeters Limited

HARWELL RED 4034 DOSIMETERS

SPECIFICATION

Harwell Red 4034 Dosimeters for the measurement of radiation dose.

Material:	A single batch of Red 4034 Perspex cast polymethylmethacrylate sheets.
Dimensions:	30 mm x 11 mm. Thickness 3±0.55 mm.
Measurement Reproducibility:	Coefficient of variation of specific absorbance measurements on sets of dosimeters from the batch, simultaneously irradiated together, in a radiation field uniform within ±1%, is ≤2% over the entire calibrated range, 5 to 50 kGy.
Calibration Quality:	Over the calibrated range, all mean specific absorbance data points are within 2% of a fourth-order polynomial least-squares fit to the data.
Traceability:	Harwell calibration is traceable to the UK standard of absorbed dose at the National Physical Laboratory (NPL). Calibration performance of each batch is verified by NPL inter-comparison.
Shelf life:	10 Years from date of release
Packaging:	Sealed in labelled sachets made of polyester/aluminium foil/polyester/ polythene laminate, packed 1000 per carton. Packing to defined AQL's checked to BS6001 (ISO 2859-1), single normal inspection, level II.

Registration in England and Wales, No.2917906. Registered office, Harwell, Didcot, Oxfordshire OX11 0RA, United Kingdom.

HARWELL
Dosimeters

Harwell Dosimeters Limited

HARWELL AMBER 3042 DOSIMETERS

SPECIFICATION

Harwell Amber 3042 Dosimeters for the measurement of radiation dose.

Material:	A single batch of Amber 3042 Perspex cast polymethylmethacrylate sheets.
Dimensions:	30 mm x 11 mm. Thickness 3 ± 0.55 mm.
Measurement Reproducibility:	Coefficient of variation of specific absorbance measurements on sets of dosimeters from the batch, simultaneously irradiated together, in a radiation field uniform within $\pm 1\%$, is $\leq 2.5\%$ over the ranges 1 to 10 kGy at 603nm wavelength and 10 to 30 kGy at 651nm.
Calibration Quality:	Over the calibrated range, all mean specific absorbance data points are within 3% of a fourth-order polynomial least-squares fit to the data.
Traceability:	Harwell calibration is traceable to the UK standard of absorbed dose at the National Physical Laboratory (NPL). Calibration performance of each batch is verified by NPL inter-comparison.
Packaging:	Sealed in labelled sachets made of polyester/aluminium foil/polyester/ polythene laminate, packed 1000 per carton. Packing to defined AQL's checked to BS6001 (ISO 2859-1), single normal inspection, level II.

1. 적용범위(Scope)

본 보고서는 EN/ISO 11137 제1부 및 제2부, 3부의 조사기 도즈맵핑 관련 요구사항에 대한 지침의 요건을 제공한다.

적법하게 훈련된 판정 및 검증된 인원으로 본 보고서를 정확하게 실행 해야 한다.

(This report of ISO 11137 gives guidance on the requirements in ISO 11137 parts 1 and 2 relating to irradiation dose mapping. The party accepting responsibilities for defined elements is required to assign these elements to competent personnel, with competence demonstrated through appropriate training and qualification.)

2. 목적(Purpose)

㈜소야그린텍의 감마선 조사설비에 대해 선원의 감쇠로 인한 흡수선량의 변화를 확인하며, 시공사(MDS-Nordion)에서 제공한 “Timer Setting Table”과 흡수선량 및 밀도와의 관계에 따른 적합성을 확인하여, 조사기(Model:JS-10000)의 설치 품질을 유지함을 목적으로 한다.

(Change of absorbed dose due to source attenuation after Gamma irradiator of Soyagreentec Co.,Ltd. shall be confirmed. Suitability in conformity to the "Timer Setting Table" provided by Contractor(MDS-Nordion) and the relationship between absorbed dose and density determine. So Installation qualification of irradiator is aim at maintaining.)

3. 용어와 정의(Terms and definitions)

3.1 흡수 선량(absorbed dose), 선량(dose)

물질의 단위 질량에 전달된 방사능 에너지의 양

(Quantity of ionizing radiation energy imparted per unit mass of a specified material).

3.2 선량 표 작성(dose mapping)

정해 놓은 조건에서 조사한 선량의 피 조사 체는 내 분포와 변화의 측정

(Measurement of dose distribution and variability in material irradiated under defined conditions).

3.3 선량 계(dosimeter)

방사선에 대하여 재현성이 있고 측정 가능한 반응을 하는 특정 물질에 대한 흡수선량 측정에 사용하는 기기

(Device having a reproducible, measurable response to radiation, which can be used to measure the absorbed dose in a given system).

3.4 선량계측(dosimetry)

선량 계를 사용한 흡수선량의 측정

(Measurement of absorbed dose by the use of dosimeters)

3.5 가동품질인정(Operation qualification:OQ0029)

4. 일반사항(General)

OQ의 목적은 설치된 방사선 조사기가 정해진 허용 범위 내에서 가동하고 알맞은 선량을 전달하는지 확인하기 위한 것이다. 이것은 선량표 작성 과정을 통한 선량 분포의 측정과 그 분포를 가공 변수에 적용하여 달성한다.

(The purpose of OQ is to demonstrate that the irradiator, as installed, is capable of operating and delivering appropriate doses within defined acceptance criteria. This is achieved by determining dose distributions through dose mapping exercises and relating these distributions to process parameters.)

5. 시험계획(Test plan)

5.1 설비 및 계측기(Equipments and measuring instruments)

5.1.1 조사기 시설(Irradiation equipment) : JS-10000

5.1.2 버니어켈리퍼스(Vernier calipers) : Mitutoyo : Model / 08608853 : Serial Number)

5.1.3 분광광도계(Spectro photometer) : Optizen1412V : Model / 1V2244-097016-00 : Serial Number)

5.2 준비 재료(Preparation materials)

5.2.1 골판지(Corrugated Cardboard)

크기(Size) : 가로(Width):830mm, 세로(Length):0.7mm, 높이(Height):1,500mm

수량(Quantity):210개, 단위중량(Weight):1kg

5.2.2 전분(Starch)

수량(Quantity):30개, 단위중량(Weight):20kg

5.2.3 조사용기(Tote)

1~55번

5.3 시험기간(Test period)

재 료 명(Materials)	시 험 기 간(Test period)	비 고(note)
골 판 지 (Corrugated Cardboard)	2012. 11. 02. ~ 2012. 11. 03.	최저밀도 (minimum density)
	2012. 11. 03. ~ 2012. 11. 04.	공정중지 적용 (process interruption applied)

전 분 (Starch)	2012. 11. 09. ~ 2012. 11. 10.	최고밀도 (maximum density)
	2012. 11. 10. ~ 2012. 11. 11.	공정중지 적용 (process interruption applied)

5.4 시험기준(Test standard)

5.4.1 OQ에서의 선량표 작성은 방사선 조사기의 선량 분포와 재현성에 대한 특성화 및 공정중지가 선량에 미치는 영향을 설정하기 위한 것이다. 선량표 작성은 균질한 밀도를 가진 재료를 설계한도까지 적재한 조사 용기 내에 선량계를 놓고 실시하여야 한다. 이때 밀도는 조사기를 사용할 밀도범위 내에 속하여야 한다. 최소한 두 차례 선량표 작성을 하여야 하고, 한번은 조사기를 사용할 예정인 밀도 범위의 최저 한계, 또 한번은 최고 한계에 근접해서 실시한다.

(Dose mapping for OQ is carried out to characterize the irradiator with respect to the distribution and reproducibility of dose and to establish the effect of process interruption on dose. Dose mapping should be performed by placing dosimeters in an irradiation container filled to its design limits with material of homogeneous density. This density should be within the density range for which the irradiator is to be used. At least two dose mapping exercises should be carried out, one with material close to the lower limit of the density range for which the irradiator is intended to be used and another with material close to the upper limit of this range.)

5.4.2 조사 용기 사이에서의 선량의 다양성의 선량 분포를 측정할 수 있도록, 각각 선택한 밀도에서 충분한 개수의 조사 용기 (적어도 3개)에 대해 선량표 작성을 하여야 한다.

(A sufficient number of irradiation containers (at least three) should be dose mapped at each chosen density to allow determination of variability of dose and dose distribution between containers.)

5.4.3 개별 선량계, 선량계는 조사 용기 전체 부피에 걸쳐 선량 분포를 측정하고 결정할 수 있도록 3차원적으로 배치하여야 한다.

(Individual dosimeters, dosimeter strips or dosimeter sheets should be placed in a three-dimensional array sufficient to determine and resolve the dose distribution throughout the entire volume of the irradiation container.)

5.4.4 공정 중지의 영향을 확인하기 위해 별도의 선량표 작성 또는 운반 선량(transit – dose) 계산을 실시하여야 한다. 운반 선량 계산이 적당하였는지는 선량계측으로

확인하여야 한다. 이는 조사 용기에 선량계 또는 선량계 박막을 위의 방법으로 설치하고, 선원 이동에 의해 선량이 가장 크게 영향을 받을 것으로 예상되는 곳에 있는 선원에 조사 용기가 근접했을 때 공정을 방해하는 방법을 통해 이루어 질 수 있다. 공정 중지의 영향은 정상 공정 조건에서 작성한 선량표의 결과를 비교하여 평가한다. 그 영향을 정확하게 평가하기 위하여 공정 중지를 수 차례 실시할 필요가 있다.

(A separate dose mapping exercise should be carried out or a calculation of transit dose performed in order to assess the effect of process interruption. The appropriateness of calculations of transit dose should be verified by dosimetry. This exercise can be done through irradiating a container having dosimeters or dosimeter strips located as described above, and interrupting the process when the container is close to the source where dose is expected to be most influenced by source transit. The effect of process interruption is evaluated by comparing the results with those of dose mapping exercises carried out under normal process conditions. It might be necessary to interrupt the process multiple times in order to evaluate accurately the effect.)

6. 시험방법(Test method)

6.1 최저밀도 시험(minimum density test) : 골판지(Corrugated Cardboard)

6.1.1 마스터 타이머를 4분 37초로 설정한다. (Master timer setting : 04 m 37 sec)

6.1.2 2번, 15번, 45번 토트에는 골판지 70개씩 적재한다. 그 외 토트는 빈상태로 둔다. (70 per Tote No.2, No.15 and No.45 for each Corrugated cardboard. The others are empty.)

6.1.3 2, 15, 45번 토트에는 상, 중, 하 부위에 3차원으로 총 27개의 도시메터를 부착한다. (Dosimeters should be placed in a three dimensional array, including the surface, of the test material to be irradiated. The dosimeters should be sufficient in number to measure the dose distribution throughout the entire volume of the irradiation container.)

6.1.4 총 6바퀴의 공정을 거친 후 도시메터를 수거하여 흡수선량을 판독한다. (Process is progressed 6 cycle, and dosimeters(absorbed dose) readout.)

6.2 최고밀도 시험(maximum density test) : 전분(Starch)

6.2.1 마스터 타이머를 4분 37초로 설정한다.(Master timer setting : 04 m 37 sec)

6.2.2 1번, 15번, 45번 토트에는 골판지 70개씩 적재한다. 그 외 토트는 빈상태로 둔다. (70 per Tote No.1, No.15 and No.45 for each Starch. The others are empty.)

6.2.3 1, 15, 45번 토트에는 상,중,하 부위에 3차원으로 총 27개의 도시메터를 부착한다.
(Dosimeters should be placed in a three dimensional array, including the surface, of the test material to be irradiated. The dosimeters should be sufficient in number to measure the dose distribution throughout the entire volume of the irradiation container.)

6.2.4 총 6바퀴의 공정을 거친 후 도시메터를 수거하여 흡수선량을 판독한다.
(Process is progressed 6 cycle, and dosimeters(absorbed dose) readout.)

6.3 공정 중지의 영향을 확인하는 시험(Test for confirm to influence of process interruption)

6.3.1 6.1항 및 6.2항 방법과 같이 준비하여 시험을 한다(1토트만 평가).
(See 6.1, 6.2. and evaluate 1 tote)

6.3.2 6바퀴 공정 중 각 바퀴마다 1시간의 공정 정지를 실시한다.
(Process interruption of 1 hour per 1cycle during 6 cycle.)

6.3.3 총 6바퀴의 공정을 거친 후 도시메터를 수거하여 흡수선량을 판독한다.
(Process is progressed 6 cycle, and dosimeters(absorbed dose) readout.)

7. 시험결과(Test results)

7.1 최저밀도 시험(골판지) 결과(minimum density test results)

Tote No	최소선량 (Minimum dose:kGy)	위치 (Location)	최대선량 (Maximum dose:kGy)	위치 (Location)
2	28.5	M5	33.0	M8
15	28.5	M5	33.2	M8
45	28.5	M5	32.8	M8

참조(Reference) : 첨부 1(Attachment 1)

7.2 공정 중지의 영향을 확인하는 시험(골판지) 결과

(Test results for confirm to influence of process interruption : Corrugated Cardboard)

Tote No	최소선량 (Minimum dose:kGy)	위치 (Location)	최대선량 (Maximum dose:kGy)	위치 (Location)
2	28.2	M5	32.8	M8
-	-	-	-	-

참조(Reference) : 첨부 2(Attachment 2)

7.3 최고밀도 시험(전분) 결과(maximum density test results)

Tote No	최소선량 (Minimum dose:kGy)	위치 (Location)	최대선량 (Maximum dose:kGy)	위치 (Location)
1	20.4	M5	30.9	M8
15	20.6	M5	30.9	M8
45	20.6	M5	31.1	M8

참조(Reference) : 첨부 4(Attachment 4)

8. 판정(Decisions)

2가지 기준으로 최소밀도, 최대밀도로 시험을 실시하였고, 공정중지의 변수를 두고 시험을 실시하였다. 즉, EN/ISO 11137-3:2006 규격의 지침을 적용한 시험결과는 적합으로 판단되며, 얻어진 선량표 데이터는 실제 제품 적재 시 최대 및 최소 선량을 제공 가능한 위치에 대해 유용한 정보로 사용할 수 있다.

(Test for minimum density, maximum density, variable of process interruption. EN / ISO 11137-3:2006 standard guidelines applied test result is suitable, data from dose mapping exercises will often provide useful indication of the probable locations of maximum and minimum doses in actual product loads.)

9. 교정주기(Test period)

교정 주기는 1년 이하이며, 차기 교정 일자는 2012년 11월 12일 이전이다.

(Less than 1 year calibration period, the next calibration period before the November 12, 2012.)

단, 차기 교정일 내에 Co-60이 추가 충전이 되었을 경우 재 실시 한다.

(However irradiation dose mapping is re-calibration when Cobalt 60 is re-charging before next calibration period.)

Technology for better life!

SOYAGREENTEC

900-3, Sangsin-ri, Hyangnam-eup, Hwasung-si, Gyeonggi-do, Korea, TEL: (031)353-6999(代) FAX: (031)353-6979

1) Purpose

Products can affect the dose of a product (relatively high density of product) of a product loaded with **KM CORPORATION.** Tote (loaded up to full density products 3TOTE, at least part of the density product 1TOTE load) close to its effectiveness after (including temperature) is measured.

2) Definitions

2.1. Master Process Specification : Tote (carried equipment) loaded in the batch of product

2.2. Tote(Irradiation container) : Products that carry the load and to move containers.

2.3. Product Dose mapping : DOSE MAPPING between the dose variability in quantities sufficient to determine the shipping container must be running on. Maximum and minimum doses and routine surveillance to determine the location should be suitable. This test, regardless of the dose to the maximum density and minimum density should be run.

2.4. Mixed density within the irradiator : Difference in the density of each product according to the distribution of the absorbed dose and dose must be evaluated on.

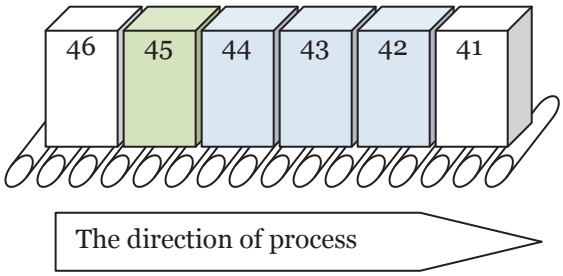
2.5. Partially filled irradiation containers : TOTE loaded part of the maximum and minimum dose to completely fill the position of the product loaded is different from TOTE. This difference is on the process leading to a similar product or substance, or TOTE Shielding materials used to fill in the variance can be reduced

3) Test the products information

Product name	Unit weight (kg)	Explanation
Starch	20	The high density material.
Empty (No products)	0	The lesser density.
KM-6612L	5.3	This product has the same mass and density as a product replacing dummy.

4) Test method

TOTE loaded with products of the starch in front of the high density (0.41 g/cm3) to fill the TOTE, part of the product is loaded, the last blank in the form of TOTE located behind the operation is carried out.



Picture 1

Tote No.	Product	Density(g/cm³)	Remarks	Load shape
41	Starch	0.41	Filled filled with starch	42	Sterilized Non-Woven Wiper	0.064	Each per TOTE Full Fill(8 boxs)	43				
44				
45	Blank Box	0	Part of a box loaded	46	Blank Tote	0	Do not load anything	
5) Process conditions

Topics		Contents
Master Time		4 min 37 sec (November 2012 by)
Temperature	Irradiation room	5.0 ℃
	Product	Using the results of the temperature tape 29 (℃) is less than that.
Dosimeter		Red 4034 Perspex Dosimeter(Batch : JT)

6) Result and evaluation

6.1. Result

Tote No.	Dose site	ABS	Thickness(cm)	ABS/cm	Dose(kGy)
42	M5(min)	0.836	0.333	2.51	25.9
	M8(max)	0.792	0.273	2.90	32.6
43	M5(min)	0.738	0.294	2.51	25.9
	M8(max)	0.899	0.309	2.91	32.8
44	M5(min)	0.794	0.315	2.52	26.1
	M8(max)	0.894	0.306	2.92	33.0
45	M8(max)	0.941	0.318	2.96	33.7
	-	-	-	-	-

Reference

Tote No. **42, 43, 44 (**Full load**)**

Tote No. **45** (Loaded parts Tote)
M5 : minimum dose position
M8 : maximum dose position

6.2. Evaluation

Set dose 25 kGy (minimum dose = sterilization dose) ~ 40 kGy (maximum dose) is. Tote No.42 is the measured minimum dose of 25.9 kGy and 25 kGy dose, the value is set higher than the minimum requirements included in the dose range is suitable. The No.43, 44, 45 the dose range set also includes Tote is so fit.

PRODUCT DOSE MAPPING

▶ CUSTOMER : KM CORPORATION

▶ PRODUCTS : Sterilized Non-Woven Wiper

Dimension (mm) : 340 mm(W) × 315 mm(L) × 320 mm(H)
Loading Quantity : 8 carton

▶ Process parameter

Set Master Timer : 4 Min 37 Sec

▶ DOSIMETER. : HARWELL Red Perspex Dosimeter 4034

▶ DOSIMETER BATCH : JT

▶ RESULTS

1. Dose Measurement

Position	Dose Map 1 Tote No. **42**	Dose Map 2 Tote No. **43**	Dose Map 3 Tote No. **44**	Average	Location
D_{Min}	25.9	25.9	26.1	26.0	M5
D_{Max}	32.6	32.8	33.0	32.8	M8
D_{Refer}	–	–	–	–	–

2. Variance calculation

$Var(D_{Min}) = [(25.9 - 26.0)^2 + (25.9 - 26.0)^2 + (26.1 - 26.0)^2]/(3 - 1) = 0.015\ (kGy)^2$

$Var(D_{Max}) = [(32.6 - 32.8)^2 + (32.8 - 32.8)^2 + (33.0 - 32.8)^2]/(3 - 1) = 0.04\ (kGy)^2$

3. Standard deviation calculation

$S(D_{Min}) = \sqrt{Var(D_{Min})} = 0.122\ (kGy)^2$

$S(D_{Max}) = \sqrt{Var(D_{Max})} = 0.2\ (kGy)^2$

4. Uncertainty at 95% confidence level

For D_{Min} : 2S $(D_{Min})/(D_{min})$ avg = (2 × 0.122 kGy/26.0 kGy) × 100 = 0.94 %

For D_{Max} : 2S $(D_{Min})/(D_{Max})$ avg = (2 × 0.2 kGy/32.8 kGy) × 100 = 1.22 %

5. Dose Uniformity Ratio

D_{Max} / D_{Min} : 32.8 kGy / 26.0 kGy = 1.26 kGy

6. Routine monitoring position & Correction factor

Routine monitoring location : D_{Min} (M-5)

Correction factor (D_{Min}) : $D_{Min} - (D_{Min} \times 0.0094)$ = $D_{Min} \times 0.99$

Correction factor (D_{Max}) : $(D_{Min} \times 1.26) \times 1.0122$ = $D_{Min} \times 1.28$

7. Dose Distribution

Dose Distribution Records

Technology for better life!

SOYAGREENTEC

900-3, Sangsin-ri, Hyangnam-eup, Hwasung-si, Gyeonggi-do, Korea, TEL: (031)353-6999(代) FAX: (031)353-6979

1) Purpose

Products can affect the dose of a product (relatively high density of product) of a product loaded with **KM CORPORATION.** Tote (loaded up to full density products 3TOTE, at least part of the density product 1TOTE load) close to its effectiveness after (including temperature) is measured.

2) Definitions

2.1. Master Process Specification : Tote (carried equipment) loaded in the batch of product

2.2. Tote(Irradiation container) : Products that carry the load and to move containers.

2.3. Product Dose mapping : DOSE MAPPING between the dose variability in quantities sufficient to determine the shipping container must be running on. Maximum and minimum doses and routine surveillance to determine the location should be suitable. This test, regardless of the dose to the maximum density and minimum density should be run.

2.4. Mixed density within the irradiator : Difference in the density of each product according to the distribution of the absorbed dose and dose must be evaluated on.

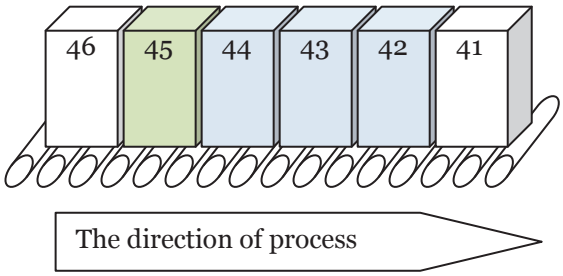
2.5. Partially filled irradiation containers : TOTE loaded part of the maximum and minimum dose to completely fill the position of the product loaded is different from TOTE. This difference is on the process leading to a similar product or substance, or TOTE Shielding materials used to fill in the variance can be reduced

3) Test the products information

Product name	Unit weight (kg)	Explanation
Starch	20	The high density material.
Empty (No products)	0	The lesser density.
KM-6612L	7.4	This product has the same mass and density as a product replacing dummy.

4) Test method

TOTE loaded with products of the starch in front of the high density (0.41 g/cm3) to fill the TOTE, part of the product is loaded, the last blank in the form of TOTE located behind the operation is carried out.



Picture 1

Tote No.	Product	Density(g/cm3)	Remarks	Load shape
41	Starch	0.41	Filled filled with starch	42	Sterilized Non-Woven Wiper	0.09	Each per TOTE Full Fill(8 boxs)	43				
44				
45	Blank Box	0	Part of a box loaded	46	Blank Tote	0	Do not load anything	
5) Process conditions

Topics		Contents
Master Time		4 min 37 sec (November 2012 by)
Temperature	Irradiation room	5.0 ℃
	Product	Using the results of the temperature tape 29 (℃) is less than that.
Dosimeter		Red 4034 Perspex Dosimeter(Batch : JT)

6) Result and evaluation

6.1. Result

Tote No.	Dose site	ABS	Thickness(cm)	ABS/cm	Dose(kGy)
42	M5(min)	0.836	0.333	2.51	25.9
	M8(max)	0.792	0.273	2.90	32.6
43	M5(min)	0.738	0.294	2.51	25.9
	M8(max)	0.899	0.309	2.91	32.8
44	M5(min)	0.794	0.315	2.52	26.1
	M8(max)	0.894	0.306	2.92	33.0
45	M8(max)	0.941	0.318	2.96	33.7
	-	-	-	-	-

Reference

Tote No. **42, 43, 44 (**Full load**)**

Tote No. **45** (Loaded parts Tote)
M5 : minimum dose position
M8 : maximum dose position

6.2. Evaluation

Set dose 25 kGy (minimum dose = sterilization dose) ~ 40 kGy (maximum dose) is. Tote No.42 is the measured minimum dose of 25.9 kGy and 25 kGy dose, the value is set higher than the minimum requirements included in the dose range is suitable. The No.43, 44, 45 the dose range set also includes Tote is so fit.

PRODUCT DOSE MAPPING

▶ CUSTOMER : KM CORPORATION

▶ PRODUCTS : Sterilized Non-Woven Wiper

Dimension (mm) : 465 mm(W) × 330 mm(L) × 360 mm(H)
Loading Quantity : 8 carton

▶ Process parameter

Set Master Timer : 4 Min 37 Sec

▶ DOSIMETER. : HARWELL Red Perspex Dosimeter 4034

▶ DOSIMETER BATCH : JT

▶ RESULTS

1. Dose Measurement

Position	Dose Map 1 Tote No. **42**	Dose Map 2 Tote No. **43**	Dose Map 3 Tote No. **44**	Average	Location
D_{Min}	25.9	25.9	26.1	26.0	M5
D_{Max}	32.6	32.8	33.0	32.8	M8
D_{Refer}	–	–	–	–	–

2. Variance calculation

$Var(D_{Min}) = [(25.9 - 26.0)^2 + (25.9 - 26.0)^2 + (26.1 - 26.0)^2]/(3 - 1) = 0.015\ (kGy)^2$

$Var(D_{Max}) = [(32.6 - 32.8)^2 + (32.8 - 32.8)^2 + (33.0 - 32.8)^2]/(3 - 1) = 0.04\ (kGy)^2$

3. Standard deviation calculation

$S(D_{Min}) = \sqrt{Var(D_{Min})} = 0.122\ (kGy)^2$

$S(D_{Max}) = \sqrt{Var(D_{Max})} = 0.2\ (kGy)^2$

4. Uncertainty at 95% confidence level

For D_{Min} : 2S $(D_{Min})/(D_{min})$ avg = (2 × 0.122 kGy/26.0 kGy) × 100 = 0.94 %

For D_{Max} : 2S $(D_{Min})/(D_{Max})$ avg = (2 × 0.2 kGy/32.8 kGy) × 100 = 1.22 %

5. Dose Uniformity Ratio

D_{Max} / D_{Min} : 32.8 kGy / 26.0 kGy = 1.26 kGy

6. Routine monitoring position & Correction factor

Routine monitoring location : D_{Min} (M-5)

Correction factor (D_{Min}) : $D_{Min} - (D_{Min} \times 0.0094)$ = $D_{Min} \times 0.99$

Correction factor (D_{Max}) : $(D_{Min} \times 1.26) \times 1.0122$ = $D_{Min} \times 1.28$

7. Dose Distribution

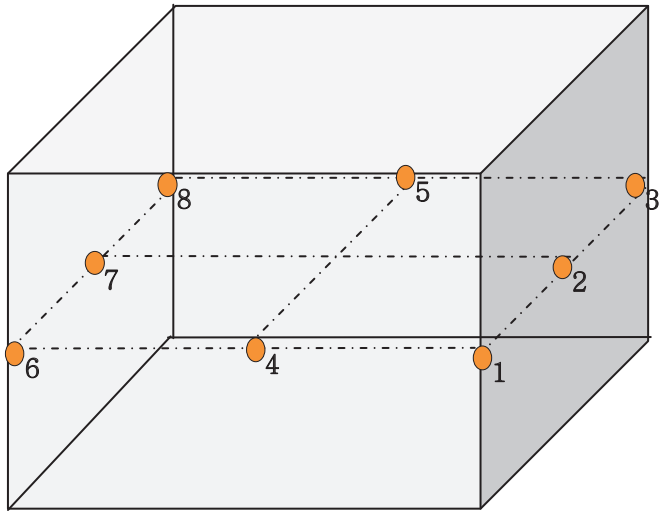
Min. Dose		-	-	-	-
Max. Dose		0.941	0.318	2.96	33.7
Tote Number		**45**		-	

Dosimeter Locations

A box Part load



* Central Dosimeter Position (5) located in the middle of the Carton outside.
* Dosimeter Position in order to enhance the understanding and create larger picture of Carton .

Attachment 13.

Master record for Gamma irradiation process

Master record for gamma irradiation process

1. Receipt of product & Review for irradiation request

Irradiation Batch No.	

고객명/Customer		승 인/Approved by	(서명)
제품명/Product Name		수 령/Received by	(서명)
수 량/Quantity	Carton	수령일자/Received Date	20 년 월 일
중 량/Unit Weight.	kg	출고 희망일	월 일 시
제조일련번호/Lot No			
Special Handling Requirement			

2. Determination to be applied

외관검사	정상( ), 이상( )	승 인/Approved by	(서명)
특이사항:		검 토/Checked by	(서명)
		검 사/Tested by	(서명)
요구선량 Specified Dose	D(Max) kGy D(Min) kGy	적재방식지침/ Loading configuration	SYL -

3. Irradiation of products

3.1공정 파라메터 조정/ Adjustment of Process Parameter	M/T(min sec) Set Cycle( )	승 인/ Approved by	(서명)
3.2제품적재/Product Loading(Start Cycle)		적재/Loaded by	(서명)
적재일시/Date	월 일 시 분	적재토트번호/Loading Tote Number	~ ( )
적재수량/Loading Quantity	Carton	Dosimeter 종류 (batch Number)	Red 4034( ) Amber 3042( )

선량계 부착위치 및 수량/ Dosimeter Location & Quantity	Tote No.	A( )	B( )	C( )
	Location 1			
	Location 2			
부분적재 Tote/Partial Loading Tote	(Tote No : Carton/Tote)			

3.3작업공정/Process Running

Cycle(예상선량)	시간(Time)	확 인			
1(kGy)	일 시 분		8(kGy)	일 시 분	
2(kGy)	일 시 분		9(kGy)	일 시 분	
3(kGy)	일 시 분		10(kGy)	일 시 분	
4(kGy)	일 시 분		11(kGy)	일 시 분	
5(kGy)	일 시 분		12(kGy)	일 시 분	
6(kGy)	일 시 분		13(kGy)	일 시 분	
7(kGy)	일 시 분		14(kGy)	일 시 분	
			15(kGy)	일 시 분	

공정정지 /Process interruption	**1**	월 일 시 분	**제품위치 /Container Position**	~
YES( ) NO( )	**2**	월 일 시 분	**제품위치 /Container Position**	~

3.4 제품하역/Product Unloading(Finish Cycle)

하역일시 /Unloaded Date	월 일 시 분	**하 역/Unloaded by**	(서명)
하역수량 /Unloading Quantity	Carton	**도시메타 부착위치 확인 /Identification of Dosimeter Location & Frequency**	YES( ) NO( )
제품손상 및 상태확인 /Identification of Product damage & status	정 상( ) 이 상( )	**이상내용/Note**	
검 토 /Checked by	(서명)	**승 인 /Approved by**	(서명)

4. Release of product & Certification of dose

판정일시/Date	20 년		월		일	
선량평가/Dosimetry analysis		**측 정/Measured by**		(서명)		
Dosimeter location	A-1	A-2	B-1	B-2	C-1	C-2
ABS						
Thickness	cm	cm	cm	cm	cm	cm
ABS/cm						
Delivered dose	kGy	kGy	kGy	kGy	kGy	kGy
최대 최소 선량비 D(Max)/D(Min) Ratio			**표준편차**		Maximum(kGy) Minimum(kGy)	
참조 최소 선량비 D(Ref)/D(Min) Ratio			Calculation 최 소 : kGy 최 대 : kGy			
참조 최대 선량비 D(Ref)/D(Max) Ratio						
Absorbed Dose Range	**최 소**(kGy) / **최 대**(kGy)					
감마선 조사증명서 번호 /Gamma Irradiation Certificate number						

검 토 /Checked by	(서명)	**승 인 /Approved by**	(서명)	합격/Acceptance	불합격/Rejection

Attachment 14.

Certificate of Gamma irradiation

CERTIFICATE

of gamma irradiation

Certificate No. : S 120101 0001

Customer : Company name

Item Specification	QTY	Product (Lot No)	Specified Dose	
			D_{min}(kGy)	D_{max}(kGy)
Product name	–	–	0	0
TOTAL	–			

Irradiated Date : 1-Jan-12

Irradiation(Batch No.) : -

Plant : Master Irradiation

Irradiation Container (Tote) No : 1 ~ 55

Irradiator : Cobalt 60 gamma irradiator (JS-10000 High performance tote type)

Dosimeters for Monitoring (Batch No) : Harwell PMMA Dosimeter (Red 4034 JT)

Dosimetry Results (Dmin to Dmax) : 0 ~ 0 kGy

Date : 1-Jan-12

Approved : ki Hwan, Kim *Signature* _____

Title : Q.M.R / Director

We hereby certify that the above specified goods have been duly irradiated by gamma-ray.
